The 1960s on Film Jim Willis 2021-10-11 The 1960s on Film tells the narrative of the 1960s through the lens of the movie camera, analyzing 10 films that focus on the people, events, and issues of the decade. Films create both an impression of and — at times for younger audiences — a primary definition of events, people, and issues of an era. The 1960s on Film examines the 1960s as the decade was presented in ten films that focused on that decade. Discussion will focus on both what the films have to say about the era and how close they come to accurately depicting it. For example, films such as Mississippi Burning and Selma tell the story of racial conflict and hope for reconciliation in the 1960s. Other films such as The Right Stuff and Hidden Figures show the deep fascination America had at that time with the burgeoning space program and NASA, while Easy Rider analyzes the role of rock music and drugs among young people of the decade. The Deer Hunter studies the controversies surrounding the war in Vietnam. The Graduate, Mad Men, JFK, and Thirteen Days also receive significant treatment in this exciting volume.

Space Cowboy Survival Guide Heather Long 2016-12-13

Lost in Space Greg Klerkx 2005-01-11 The daring, revolutionary NASA that sent Neil Armstrong to the moon has lost its meteoric vision, says journalist and space enthusiast Greg Klerkx. NASA, he contends, has devolved from a pioneer of space exploration into a factionalized bureaucracy focused primarily on its own survival. And as a result, humans haven't ventured beyond Earth orbit for three decades. Klerkx argues that after its wildly successful Apollo program, NASA clung fiercely to the spotlight by creating a government-sheltered monopoly with a few Big Aerospace companies. Although committed in theory to supporting commercial spaceflight, in practice it smothered vital private-sector innovation. In striking descriptions of space milestones spanning the golden 1960s Space Age and the 2003 Columbia tragedy, Klerkx exposes the "real" NASA and envisions exciting public-private cooperation that could send humans back to the moon and beyond.

Mercury Rising: John Glenn, John Kennedy, and the New Battleground of the Cold War Jeff Shesol 2021-06-01 A riveting history of the epic orbital flight that put America back into the space race. If the United States couldn't catch up to the Soviets in space, how could it compete with them on Earth? That was the question facing John F. Kennedy at the height of the Cold War—a perilous time when the Soviet Union built the wall in Berlin, tested nuclear bombs more destructive than any in history, and beat the United States to every major milestone in space. The race to the heavens seemed a race for survival—and America was losing. On February 20, 1962, when John Glenn blasted into orbit aboard Friendship 7, his mission was not only to circle the planet; it was to calm the fears of the free world and renew America's sense of self-belief. Mercury Rising re-creates the tension and excitement of a flight that shifted the momentum of the space race and put the United States on the path to the moon. Drawing on new archival sources, personal interviews, and previously unpublished notes by Glenn himself, Mercury Rising reveals how the astronaut's heroics lifted the nation's hopes in what Kennedy called the "hour of maximum danger."

Into That Silent Sea Francis French 2007 A history of early space flight focuses on the careers of both American astronauts and Soviet cosmonauts and includes coverage of other persons who worked in support roles.

The Metamorphosis Franz Kafka 2019-06-18 New translation of The Metamorphosis by Franz Kafka. Poor Gregor Samsa! This guy wakes up one morning to discover that he's become a "monstrous vermin". The first pages of The Metamorphosis where Gregor tries to communicate through the bedroom door with his family, who think he's merely being lazy, is vintage screwball comedy. Indeed, scholars and readers alike have delighted in Kafka's gallows humor and matter-of-fact handling of the absurd and the terrifying. But it is one of the most enigmatic stories of all time, with an opening sentence that's unparalleled in all of literature.

The Real Cowboys & Aliens John LeMay 2014-03-01 When you first saw this book, you probably assumed it was fiction, right? Wrong! As it turns out, America's Old West cowboys did encounter UFOs and also creatures that they believed were "aliens." This happened not in comic books and films but in real life. In this book, you will read actual eyewitness accounts describing strange objects seen in the skies, and, in some cases, the even stranger occupants of those UFOs! Did you know that many years before the reported crash of a UFO near Roswell New Mexico, another weird object fell out of the sky in Aurora, Texas, in 1897? The citizens of Aurora said the dead pilot was "not of this world," and they buried him in the local cemetery, where he may still remain today. You will also learn about the flying alien monster of Crawfordsville, Indiana; the "underwater UFO" that electrocuted two men near Tacoma, Washington; a Bigfoot creature the local Native Americans said came to earth in a "small moon;" a UFO that exploded over a Texas cotton gin; and many other bizarre UFO encounters of the Old West!

Selecting the Mercury Seven Colin Burgess 2011-08-17 The names of the seven Mercury astronauts were announced in April 1959 amid a flurry of publicity and patriotism. This work provides biographical details of all thirty-two finalists for the seven coveted places as America's pioneering astronauts. All of the candidates were among the nation's elite pilots involved in testing new supersonic aircraft capabilities.

Most had served as wartime fighter and bomber pilots; some were test pilots on top secret and sophisticated aviation projects, while others were fleet admirals, prisoners of war, and proposed pilots for spaceflight programs such as the Dyna-Soar (X-20). The names of all 32 finalists have been kept secret until very recently. "Selecting the Mercury Seven" also relates the history and difficulties behind the initial choice of candidates. The lives, motivations, military careers, and achievements of the unsuccessful twenty-five finalists are explored first in fully authorized biographies. Test pilots for the U.S. Navy, Air Force, and Marine Corps, each man has a fascinating and very different story to tell. All thirty-two men had to endure meticulous, demeaning, and brutal week-long medical examinations at the Lovelace Clinic in New Mexico. This was followed by another torturous week at the Wright Aeromedical Laboratory in Ohio, where they were subjected to extreme fitness and physiological testing, the sole purpose of which was to sort out the Supermen from the near-supermen. The final part of the book examines the accomplishments and spaceflights of the seven successful candidates, bringing their amazing stories right up to date.

Calculated Risk George Leopold 2016-06-15 Unlike other American astronauts, Virgil I. "Gus" Grissom never had the chance to publish his memoirs. Killed along with his crew in a launch pad fire on January 27, 1967, Grissom also lost his chance to walk on the moon and return to describe his journey. Others went in his place. The stories of the moon walkers are familiar. Less appreciated are Grissom's contributions. The

international prestige of winning the Moon Race cannot be understated, and Grissom played a pivotal and enduring role in securing that legacy for the United States. Indeed, Grissom was first and foremost a Cold Warrior, a member of the first group of Mercury astronauts whose goal it was to beat the Soviet Union into space and eventually to the moon. Drawing on extensive interviews with fellow astronauts, NASA engineers, family members, and friends of Gus Grissom, George Leopold delivers a comprehensive and corrective account of Grissom's life that places his career in the context of the Cold War and the history of human spaceflight. *Calculated Risk: The Supersonic Life and Times of Gus Grissom* adds significantly to our understanding of that tumultuous and ultimately triumphant period in American history.

The Real Space Cowboys Ed Buckbee 2005 In 1959, seven U.S. military fighter pilots were selected to train as America's first astronauts. Alan Shepard, Gordon Cooper, Gus Grissom, John Glenn, Scott Carpenter, Wally Schirra and Deke Slayton would become known as the Mercury Seven (M7). These men, who had jockeyed for the best flying jobs in the military, began competing for rides on rockets. Most would eventually vie for the ultimate ride to the moon. The author Ed Buckbee, who has enjoyed a 40+ year association with the U.S. manned space flight program, follows these brave men who pioneered the U.S. space program. Through time and personal friendships, he captures dreams of flying higher, faster and farther than any-one in the known universe. Readers are invited behind the scenes to witness the competition between chimpanzees and astronauts, and the conflict between NASA engineers designing capsules and those who would pilot them. Through this book, readers feel the collective will of a nation to defeat the Russians in an all-out space race via an American team of 400,000 engineers, technicians, astronauts and support personnel who performed as if the country were at war. The eras of Mercury, Gemini and Apollo-- these were times of nobility and humility, but also times of arrogance, tension, and from time-to-time, humour. "Gotcha's" were commonplace astronaut pranks and a dubious answer to the question, "Are you a turtle?" resulted in a healthy bar tab. But what of our first space heroes after the Apollo program was completed? Accepting the call of Project Mercury meant a lifetime commitment. Their work continued with motivational programs for youth through the U.S. Space Camp programs, public programs at institutions such as the Smithsonian's National Air and Space Museum, the U.S. Space & Rocket Center, the U.S. Astronaut Hall of Fame, and others. The author himself shared the task of motivating the next generation through creation of U.S. Space Camp and the Astronaut Hall of Fame. Bonus DVD-10 with rare film footage: 1976 Interview with Wernher von Braun; 30th Anniversary Documentary on Skylab; "Gotcha" film about Alan Shepard; Space Camp Documentary - Reach For The Stars; 1997 Panel Discussion at Pensacola with Armstrong, Shepard, Lovell, Aldrin & Cernan; 2002 Panel Discussion at Pensacola with the Mercury Astronauts; "Gotcha" Documentary - The Lighthouse Never Fails; U.S. Space & Rocket Center Documentary - From the Valley to the Moon; Documentary - The Flight of Freedom 7; Mercury Astronauts Documentary - The First; "Gotcha" film of Apollo 12.

See Ya, Space Cowboy J.V. Speyer 2019-11-23 Escaped slave and radical Gentry is facing down his final moments, bound to the execution platform, when some soul detonates the platform and the prison wall. He didn't plan it, but he's more than happy to take the opportunity to escape and thumb his nose at fate yet again. By the time he gets his hands on a ship, the authorities have caught up to him in the form of handsome marshal Dryath Riatt. When a passerby knocks the marshal out, Gentry takes Riatt "hostage" to save him from the angry crowd. Dryath knew he shouldn't have thought the job was done just because he got his hands on escaped killer Gentry. He wasn't counting on the local crowd jumping in to help the dirtbag escape, the local garrison refusing to lift a finger to help him ... or Gentry being possibly the most beautiful man he'd ever seen. Now he's a captive, restrained, and flying to some unknown destination with a terrorist who doesn't make him feel unsafe at all. When an encounter with pirates forces a sudden landing, Gentry and Dryath must hide together before either can find safety. Can they overcome their differences, or will these enemies sell each other out before they can find happiness?

Rocketman Nancy Conrad 2006-05-02 HE WAS THE THIRD MAN TO WALK ON THE MOON— BUT THE FIRST TO DANCE ON IT. HE WAS THE ROCKETMAN. For Pete Conrad, it was all about the ride. Whether he was hot-dogging at Mach 2, test-flying every supersonic jet the Navy developed (and some they shouldn't have), orbiting the Earth at almost 20,000 mph, or redlining his Corvette, he loved pushing the envelope. Pete wasn't the squeaky-clean astronaut poster boy. The guy every NASA pilot wanted to happy-

hour with after work—and would kill to fly with—Pete had a natural outspokenness that got him washed out of the Mercury program. But the "Comeback Kid" came roaring back—flying two Gemini missions, walking on the Moon as commander of Apollo 12, commanding the first Skylab, and logging more time in space than all the original astronauts combined. This is a surprisingly candid insider's view of the greatest ride in history: America's glorious race to the stars, as seen through the eyes of a real space cowboy.

Inventing the American Astronaut Matthew H. Hersch 2012-10-08 Who were the men who led America's first expeditions into space? Soldiers? Daredevils? The public sometimes imagined them that way: heroic military men and hot-shot pilots without the capacity for doubt, fear, or worry. However, early astronauts were hard-working and determined professionals - 'organization men' - who were calm, calculating, and highly attuned to the politics and celebrity of the Space Race. Many would have been at home in corporate America - and until the first rockets carried humans into space, some seemed to be headed there. Instead, they strapped themselves to missiles and blasted skyward, returning with a smile and an inspiring word for the press. From the early days of Project Mercury to the last moon landing, this lively history demystifies the American astronaut while revealing the warring personalities, raw ambition, and complex motives of the men who were the public face of the space program.

Aurora 7 Colin Burgess 2015-08-28 TO A NATION enthralled by the heroic exploits of the Mercury astronauts, the launch of Lt. Cmdr. Scott Carpenter on NASA's second orbital space flight was a renewed cause for pride, jubilation and celebration. Within hours, that excitement had given way to stunned disbelief and anxiety as shaken broadcasters began preparing the American public for the very real possibility that an American astronaut and his spacecraft may have been lost at sea. In fact, it had been a very close call. Completely out of fuel and forced to manually guide *Aurora 7* through the frightening inferno of re-entry, Carpenter brought the Mercury spacecraft down to a safe splashdown in the ocean. In doing so, he controversially overshot the intended landing zone. Despite his efforts, Carpenter's performance on the MA-7 mission was later derided by powerful figures within NASA. He would never fly into space again. Taking temporary leave of NASA, Carpenter participated in the U.S. Navy's pioneering Sealab program. For a record 30 days he lived and worked aboard a pressurized habitat resting on the floor of the ocean, becoming the nation's first astronaut/aquanaut explorer. Following extensive research conducted by noted spaceflight historian Colin Burgess, the drama-filled flight of *Aurora 7* is faithfully recounted in this engrossing book, along with the personal recollections of Scott Carpenter and those closest to the actual events.

Caste Isabel Wilkerson 2020-08-04 #1 NEW YORK TIMES BESTSELLER • OPRAH'S BOOK CLUB PICK • "An instant American classic and almost certainly the keynote nonfiction book of the American century thus far."—Dwight Garner, *The New York Times* The Pulitzer Prize-winning, bestselling author of *The Warmth of*

Other Suns examines the unspoken caste system that has shaped America and shows how our lives today are still defined by a hierarchy of human divisions. #1 NONFICTION BOOK OF THE YEAR: Time ONE OF THE BEST BOOKS OF THE YEAR: The Washington Post, The New York Times, Los Angeles Times, The Boston Globe, O: The Oprah Magazine, NPR, Bloomberg, The Christian Science Monitor, New York Post, The New York Public Library, Fortune, Smithsonian Magazine, Marie Claire, Slate, Library Journal, Kirkus Reviews Winner of the Carl Sandberg Literary Award • Winner of the Los Angeles Times Book Prize • National Book Award Longlist • National Book Critics Circle Award Finalist • Dayton Literary Peace Prize Finalist • PEN/John Kenneth Galbraith Award for Nonfiction Finalist • PEN/Jean Stein Book Award Longlist • Kirkus Prize Finalist "As we go about our daily lives, caste is the wordless usher in a darkened theater, flashlight cast down in the aisles, guiding us to our assigned seats for a performance. The hierarchy of caste is not about feelings or morality. It is about power—which groups have it and which do not." In this brilliant book, Isabel Wilkerson gives us a masterful portrait of an unseen phenomenon in America as she explores, through an immersive, deeply researched, and beautifully written narrative and stories about real people, how America today and throughout its history has been shaped by a hidden caste system, a rigid hierarchy of human rankings. Beyond race, class, or other factors, there is a powerful caste system that influences people's lives and behavior and the nation's fate. Linking the caste systems of America, India, and Nazi Germany, Wilkerson explores eight pillars that underlie caste systems across civilizations, including divine will, bloodlines, stigma, and more. Using riveting stories about people—including Martin Luther King, Jr., baseball's Satchel Paige, a single father and his toddler son, Wilkerson herself, and many others—she shows the ways that the insidious undertow of caste is experienced every day. She documents how the Nazis studied the racial systems in America to plan their outcasting of the Jews; she discusses why the cruel logic of caste requires that there be a bottom rung for those in the middle to measure themselves against; she writes about the surprising health costs of caste, in depression and life expectancy, and the effects of this hierarchy on our culture and politics. Finally, she points forward to ways America can move beyond the artificial and destructive separations of human divisions, toward hope in our common humanity. Original and revealing, *Caste: The Origins of Our Discontents* is an eye-opening story of people and history, and a reexamination of what lies under the surface of ordinary lives and of American life today.

Space Tourism John Spencer 2004 Welcome Aboard! Space is only 100 miles away from anywhere on Earth. Since the early 1980s a small group of visionaries have been pioneering the frontier of off-world tourism. Overcoming significant obstacles, their quest to start the space tourism industry was achieved on 28 April 2001, when American businessman Dennis Tito lifted-off from Russia into Earth orbit for a week-long voyage aboard the International Space station. He was the first space tourist. Upon boarding the Station he said "I love space." He paid millions of his own dollars to fulfil his life-long quest to experience space. Since then another space tourist has flown, and many more are lining up for the opportunity. In the future, space passengers will float and dance in zero gravity, swim in spheres of warm coloured water, enjoy games, saunas, exercise, massage, shopping and world class entertainment. Several private enterprise space tourism companies have recently been formed, some by multibillionaires including the co-founder of Microsoft, Paul Allen, and the founder of Amazon.com, Jeff Bezos. They are spending millions of dollars of their own money. Why? Because they are positioning themselves to be leaders -- the Walt Disney and Baron Hilton of the space tourism industry; an industry destined to be the largest, most prestigious, and profitable industry off-world. This is the first book published in the US on the space tourism theme. It was written and designed by one of the worlds leading authorities and pioneers in the growing field of space tourism, space architect, John Spencer. The book premieres his vision, the "Destiny" orbital super yacht design and master development industry plan for expanding the space tourism movement and creating the long-term space tourism industry. His plan offers opportunities for non-rocket scientists to participate today, to make a difference, and to have a wonderful time in the process.

Whispering Smith Frank H. Spearman 2008-10 Disaster stalked the rails from the day the division superintendent of a pioneer Western railroad fired the wrecking boss, Murray Sinclair, for looting smashed freight cars. Sinclair and his bandits began a reign of terror, burning bridges, and holding up trains. In desperation, the railroad called in Whispering Smith, its ace troubleshooter. Smith, however, was conflicted about this job. Sinclair had once been his best friend and was the husband of the woman Smith loved.

Space Enterprise Phillip Harris 2009-12-29 In *Space Enterprise - Living and Working Offworld*, Dr Philip Harris provides the vision and rationale as to why humanity is leaving its cradle, Earth, to use space resources, as well as pursuing lunar industrialization and establishing offworld settlements. As a management/space psychologist, Dr. Harris presents a behavioral science perspective on space exploration and enterprise. In this his 45th book, Phil has completely revised and updated the two previous editions of this classic, placing new emphasis on the need for more synergy and participation by the private sector. He not only provides a critical review of what is happening in the global space community, but offers specific strategies for lunar economic development. The author analyzes the human factors in contemporary and future space developments, especially relative to the deployment of people aloft. This user-friendly volume offers numerous photographs, diagrams, exhibits, and case studies.

How Do You Live? Genzaburo Yoshino 2021-10-26 The first English translation of the classic Japanese novel that has sold over 2 million copies—a childhood favorite of anime master Hayao Miyazaki (*Spirited Away*, *My Neighbor Totoro*, *Howl's Moving Castle*), with an introduction by Neil Gaiman. First published in 1937, Genzaburō Yoshino's *How Do You Live?* has long been acknowledged in Japan as a crossover classic for young readers. Academy Award-winning animator Hayao Miyazaki has called it his favorite childhood book and announced plans to emerge from retirement to make it the basis of his final film. *How Do You Live?* is narrated in two voices. The first belongs to Copper, fifteen, who after the death of his father must confront inevitable and enormous change, including his own betrayal of his best friend. In between episodes of Copper's emerging story, his uncle writes to him in a journal, sharing knowledge and offering advice on life's big questions as Copper begins to encounter them. Over the course of the story, Copper, like his namesake Copernicus, looks to the stars, and uses his discoveries about the heavens, earth, and human nature to answer the question of how he will live. This first-ever English-language translation of a Japanese classic about finding one's place in a world both infinitely large and unimaginably small is perfect for readers of philosophical fiction like *The Alchemist* and *The Little Prince*, as well as Miyazaki fans eager to understand one of his most important influences.

Apollo 1 Ryan S. Walters 2021-05-25 On January 27, 1967, astronauts Gus Grissom, Ed White, and Roger Chaffee climbed into a new spacecraft perched atop a large Saturn rocket at Kennedy Space Center in Florida for a routine dress rehearsal of their upcoming launch into orbit, then less than a month away. All three astronauts were experienced pilots and had dreams of one day walking on the moon. But little did they know, nor did anyone else, that once they entered the spacecraft that cold winter day they would never leave it alive. The Apollo program would be perilously close to failure before it ever got off the ground. But rather than dooming the space program, this tragedy caused the spacecraft to be completely overhauled, creating a stellar flying machine to achieve the program's primary goal: putting man on the moon. *Apollo 1* is a candid portrayal of the astronauts, the disaster that killed them, and its aftermath. In it, readers will learn: How the Apollo 1 spacecraft was doomed from the start, with miles of uninsulated wiring and tons of flammable materials in a pure oxygen atmosphere, along with a hatch that wouldn't open. How, due to political pressure, the government contract to build the Apollo 1 craft went to a bidder with an inferior plan. How public opinion polls were beginning to turn against the space program before the tragedy and got much worse after Apollo 1 is about America fulfilling its destiny of man setting foot on the moon. It's also about the three American heroes who lost their lives in the tragedy, but whose lives were not lost in vain.

Space Cowboy Odyssey Thor Weir 2016-12-09 This is a true story of 3 youths seeking truth by traveling across America from San Diego to Hope British Columbia by horse. They learned that the horse was the migration of humanity for 1000's of years that seemed to have little affect on their surroundings, but in less than one century they seemed to see a repercussion of events from humanity affecting their surroundings. This is an adventure that transpired for over 3 years of an odyssey of a 2600 mile trek thru the Sierras, Cascades, and along the ocean by horseback in 1970. This was an idea with ambition and will power that showed within these 3 concepts anyone can accomplish their goal, dream, or their wildest desire. It shows concepts of how we can show room for improvement in the world by alternative changes that may be part

of the hope and survival of humanity. There is a documentary of the story, and many Newspapers had article of the long ride.

Footprints in the Dust Colin Burgess 2021-11-02 Following the fortieth anniversary of Apollo 11, as NASA prepares to return astronauts to the moon, Footprints in the Dust offers a thorough, engrossing, and multifaceted account of the Apollo missions. The flight of Apollo 11 was a triumph of human endeavor, persistence, and technology, one of the greatest achievements in human history. This book begins with the mission that sent Neil Armstrong and Edwin "Buzz" Aldrin to the moon, then follows American spaceflight through the harrowing rescue of Apollo 13 before moving on to the successful joint Apollo-Soyuz mission in 1975. Drawing on extensive research and interviews with key figures in the space program, the authors convey the human drama and chart the technological marvels that went into the Apollo missions. They also put the accomplishments of American spaceflight into historical context, examining the competitive space race with the Soviet Union, the roles of politics and personality in launching the mission, and the consequences, practical and profound, of this giant leap for mankind.

To a Distant Day Chris Gainor 2008-01-01 ?Insightful, instructive, and definitely worth the read.??Greg Andres, Journal of the Royal Astronomical Society of Canada ?As someone who has been teaching a course on space exploration for many years and has visited most of NASA's space centers, I have found plenty of new and valuable material in *To a Distant Day*. . . . I recommend the book to all who wish to know more about the conditions, people, and discoveries between 1890 and 1960 that led to the space age.??Pangratios Papacosta, Physics Today Although the dream of flying is as old as the human imagination, the notion of rocketing into space may have originated with Chinese gunpowder experiments

during the Middle Ages. Rockets as both weapons and entertainment are examined in this engaging history of how human beings acquired the ability to catapult themselves into space. Chris Gainor's irresistible narrative introduces us to pioneers such as Konstantin Tsiolkovsky, Robert Goddard, and Hermann Oberth, who pointed the way to the cosmos by generating the earliest wave of international enthusiasm for space exploration. It shows us German engineer Wernher von Braun creating the V-2, the first large rocket, which, though opening the door to space, failed utterly as the ?wonder weapon? it was meant to be. From there Gainor follows the space race to the Soviet Union and the United States, giving us a close look at the competitive hysteria that led to Sputnik, satellites, space probes, and?finally?human flight into space in 1961. As much a story of cultural ambition and personal destiny as of scientific progress and technological history, *To a Distant Day* offers a complete and thoroughly compelling account of humanity's determined efforts?sometimes poignant, sometimes amazing, sometimes mad?to leave the earth behind.

Sigma 7 Colin Burgess 2016-05-28 Colin Burgess offers a comprehensive yet personal look at the 1962 orbital mission of Wally Schirra aboard the spacecraft Sigma 7, the first book about this popular pioneering astronaut which explores his entire life and accomplishments. This continues the *Pioneers in Early Spaceflight* series, the volumes of which form an excellent record of Project Mercury's pioneering early phase of the Space Age. Schirra's pre-NASA life is examined, as well as his training as a NASA astronaut and for his Mercury MA-8 flight. The 6-orbit flight of Sigma 7 is fully covered from its origins through to the spacecraft's safe recovery from the ocean after a highly successful Mercury mission. Schirra's participation on the Gemini 6 and Apollo 7 missions is also told, but in brief, and the book also relates his post-NASA life and activities through to his passing in 2007. The Mercury Seven occupy a unique spot in the history of human spaceflight, and Schirra is at last given his due as one of the contributing astronauts in this painstakingly researched book.

Freedom 7 Colin Burgess 2013-09-27 Inevitably, there are times in a nation's history when its hopes, fears and confidence in its own destiny appear to hinge on the fate of a single person. One of these pivotal moments occurred on the early morning of May 5, 1961, when a 37-year-old test pilot squeezed himself into the confines of the tiny Mercury spacecraft that he had named Freedom 7. On that historic day, U.S. Navy Commander Alan Shepard carried with him the hopes, prayers, and anxieties of a nation as his Redstone rocket blasted free of the launch pad at Cape Canaveral, hurling him upwards on a 15-minute suborbital flight that also propelled the United States into the bold new frontier of human space exploration. This book tells the enthralling story of that pioneering flight as recalled by many of the participants in the Freedom 7 story, including Shepard himself, with anecdotal details and tales never before revealed in print. Although beaten into space just three weeks earlier by the Soviet cosmonaut Yuri Gagarin, Alan Shepard's history-making mission aboard Freedom 7 nevertheless provided America's first tentative step into space that would one day see its Apollo astronauts - including Alan Shepard - walk on the Moon.
