An Asian Direct and Indirect Real Estate Investment Analysis Kim Hin

David HO 2021-05-04 This book is dedicated to real estate scholastic work, in advancing the greater understanding of real estate investment analysis. This is because there has been limited research in bringing out clearly the uncertainty or risk, which is quantifiable uncertainty in real estate market analysis. Even real estate market research, which is carried out as an industry practice among private real estate researches, is no exception. Another reason is that it has been widely accepted that while the financial revolution has substantially changed many sectors of the financial industry, it has made little impact on real estate development and investment practice as ill as scholastic work.

Furthermore, while it is readily acknowledged that despite its huge share in the world health, real estate investment discipline and research is on the whole still a poorly researched subject area. As a result, the industry tends to be dominated by traditional real estate analysts with little understanding of real estate market uncertainty and capital markets.

These commentators are widely regarded to spend too much time worrying about local space supply and demand conditions, while totally losing sight of the everchanging real estate market and capital market conditions. The theme of this book is real estate investment analysis of direct and indirect real, which in turn can be appropriately managed under economic theory and the theoretical conceptions of real estate finance, provided the uncertainty is quantifiable. The book deploys case studies involving Singapore and Asia. This Black over White background viii framework enables real estate market analysis to attempt what defines the Asian direct and indirect real estate sectors; what is being measured; how it behaves (in terms of price and non-price factors); how it is structured and how it effectively achieves the objectives of sustainable total returns and manageable real estate market uncertainty.

Managing real estate market uncertainty optimally is achieved at the portfolio level through real estate asset allocation. This is important because the real estate portfolio is able to virtually eliminate the unique (i.e. specific) uncertainties among the various Asian real estate sectors; thus retaining within the portfolio only the systemic (i.e. market-wide) uncertainty. Apart from real estate asset allocation, the alternative and modern approach to risk management at the portfolio level, is the value-at-risk (VaR) approach. Another modern and important alternative to coping with uncertainty is real option analysis and pricing that help to better define real estate market uncertainty in extent and time. Real option analysis and pricing also represent uncertainty via a decision tree and the risk-neutral probability conception, in order to comprehend how uncertainty impacts on the value of real estate investment decisions. The pricing of uncertainty is based on the risk-free hedge security conception. These are best examined at the micro level of the investment in a real estate development opportunity on vacant land. Nevertheless, the real estate sectors in Singapore and Asia offer promising prospects since the Asian currency crisis of 1997. It is now timely to take stock and make an assessment of how the sectors would pan out for the future, ill into at least rest the next century. I are very pleased to present our thinking and research in international real estate with particular emphasis on Asia. The region's vast potential for real estate is itself a large incentive for international real estate research and education that has inspired me to document the significant work I have done over the years. Black over White background ix I wish all readers a pleasurable reading of this book, and I thank you sincerely for your support without which the publication of this book would be made all the more difficult. Dr HO, Kim Hin / David Honorary Professor (University of Hertfordshire, UK) (International Real Estate & Public Policy) March 2021.

Texas: Pre-License Sahr Nadeem 2017-12-10 This course provides an introduction to real estate finance. From qualifying the borrower and qualifying the property in the underwriting process to various types of financing, closing the sale, the Community Reinvestment Act and more, we discuss the monetary systems that control the market, delve into supply and demand, cover housing agencies, and discuss the government influence on real estate. Most real estate is purchased with borrowed money. The methods of real estate finance are many and varied. Making real estate loans carries a certain amount of risk for lenders; for this reason, lenders must have a firm grasp of a borrower's financial qualifications. Lenders consider a borrower's income, credit, debt, source of funds, and net worth. However, no analysis, no matter how thorough, of a borrower's creditworthiness, can be enough to ensure that a loan is completely free of risk. You will learn the methods used by lenders to qualify loan applicants and how lenders qualify the property to be mortgaged. This involves a thorough and accurate property valuation, using the sales comparison or cost approach for residential property and a cap rate or discounted cash flow analysis for investment property. These methods of valuation will be discussed in depth so that you will feel confident and familiar with them when you meet them in the real world. The basics of the financing and the sale process are discussed over two lessons. You will learn how title (abstract ownership rights to the property) is transferred to the buyer with a deed. The earnest money contract will also be discussed: terms of the contract, contingencies, and earnest money deposits. In another lesson, the focus turns to closing. You will learn the customary costs involved in a real estate transaction, how certain items are prorated between the buyer and the seller and the requirements set forth by the Real Estate Settlement Procedures Act (RESPA). This course also covers foreclosure. We consider what happens when a borrower is in default of the mortgage contract and how lenders may help borrowers prevent foreclosure through forbearance, moratoriums, and recasting. Also discussed is how, when these techniques fail, the property is foreclosed and sold at auction and how the creditors are repaid.No real estate finance course would be complete without discussing the types of mortgages available. We have two lessons that will detail the elements of conventional loans, both conforming and nonconforming; adjustable rate; graduated payment; growth equity; and reverse annuity mortgages, to name a few. The advantages and disadvantages of each type of financing are emphasized so that you may better understand the decision-making process inherent in real estate finance. Two specific types of financing, FHA-insured and VA-guaranteed loans, are reserved for separate lessons. FHA loans are insured by the government and perceived as less risky by lenders. They are available to all natural and naturalized U.S. citizens, but they carry a monthly insurance premium that cannot be canceled. VA loans are guaranteed in part by the government, but are available only to veterans, active servicemen, and certain National Guard members and special reservists. The final lesson deals with a topic important to real estate investment: Internal Revenue Code (IRC) Section 1031 exchanges (a k a 1031s). Buying and selling real estate investments can be a tax-heavy business. By "exchanging" their investments under the continuity of investment principle, investors can receive more financing and improve their portfolios. At the end of each lesson, you will be required to complete a quiz for that lesson before moving on to the next lesson. The course ends

with a real-world practice lesson that brings together the concepts and material discussed throughout the entire course.

New Frontiers in Real Estate Finance Patrick Lecomte 2021-06-04 This book introduces three innovative concepts and associated financial instruments with the potential to revolutionise real estate finance. The factorisation of commercial real estate with factor-based real estate derivatives is the first concept analysed in this book. Methodological issues pertaining to factors in real estate risk analysis are covered in detail with in-depth academic reference. The book then analyses the digitalisation of commercial real estate. The environment in which buildings operate is changing fast. Cities which used to be made up of inanimate architectural structures are growing digital skins and becoming smarter. Smart technologies applied to the built environment are fundamentally changing buildings' role in cities and their interactions with their occupants. The book introduces the concept of smart space and analyses the emergence of 'digital rights' or property rights for smart buildings in smart environments. It proposes concepts and methods for identifying, pricing, and trading these new property rights which will dominate commercial real estate in the future. Finally, the tokenisation of commercial real estate is explored. Sometimes described as an alternative to securitisation, tokenisation is a new tool in financial engineering applied to real assets. The book suggests two innovative applications of tokenisation: private commercial real estate index tokenisation and data tokens for smart buildings. With factorisation, digitalisation, and tokenisation, commercial real estate is at the forefront of innovations. Real estate's unique characteristics, stemming from its physicality, trigger new ways of thinking which might have a profound impact on other asset classes by paving the way for micro markets. Factor-based property derivatives, digital rights, and tokens embody how commercial real estate can push the boundaries of

modern capitalism and, in doing so, move at the centre of tomorrow's smart economies. This book is essential reading for all real estate, finance, and smart technology researchers and interested professionals.

[Introduction to Real Estate Development and Finance](#) Richard M. Levy

2019-11-05 This book provides readers with a basic understanding of the principles that underlie real estate development. A brief historical overview and an introduction to basic principles are followed by examples from practice. Case studies focus on how cities change and respond to the economic, technological, social, and political forces that shape urban development in North America. It is important to have a framework for understanding the risks and rewards in real estate investing. In measuring return, consideration must be given to both investment appreciation and the cash flow generated over the life of a project. In addition, metrics are presented that can be useful in assessing the financial feasibility of a real estate development proposal. This book also provides an overview of the forces of supply and demand that gauge the potential market for a new project. In determining the size of "residual demand", estimates for population growth, family formation, and new development are important. All development projects fall under the auspices of one or several jurisdictions. Though every jurisdiction has different rules and procedures, basic knowledge of the planning process is critical to the success of all development projects regardless of location. Furthermore, all projects have a legal component. Basic issues of land ownership, property rights, property transfer, and land registration are reviewed, all of which need to be considered when a property is sold or purchased. This book also provides a primary on the design and construction process. In constructing a building, a team of experts is first required to design the architectural, structural, and heating, ventilation, and air conditioning (HVAC) systems for a building. An overview is provided of each building system: wood, concrete, and steel. Critical to a successful real estate development, project management principles for the processes of design, bidding, and construction are explored, with close attention given to budgeting, scheduling, and resource management. Essential reading for anyone involved in the development of our built environment, this is a must-read introduction for students and professionals in architecture, urban planning, engineering or real estate seeking an approachable and broad view of real estate development and finance.
