Notes On The Theory Of Choice David Kreps 2018-05-04 In this book, Professor Kreps presents a first course on the basic models of choice theory that underlie much of economic theory. This course, taught for several years at the Graduate School of Business, Stanford University, gives the student an introduction to the axiomatic method of economic analysis, without placing too heavy a demand on mathematical sophistication. The course begins with the basics of choice and revealed preference theory and then discusses numerical representations of ordinal preference. Models with uncertainty come next: First is von Neumann-Morgenstern utility, and then choice under uncertainty with subjective uncertainty, using the formulation of Anscombe and Aumann, and then sketching the development of Savage's classic theory. Finally, the course delves into a number of special topics, including de Finetti's theorem, modeling choice on a part of a larger problem, dynamic choice, and the empirical evidence against the classic models.

The Logic of Decision and Action Nicholas Rescher 1967-11-15 The four main essays in this volume investigate new sectors of the theory of decision, preference, act-characteristics, and action analysis. Herbert A. Simon applies tools developed in the theory of decision-making to the logic of action, and thereby develops a novel concept of heuristic power. Adapting ideas from utility and decision theory, Nicholas Rescher proposes a logic of preference by which conflicting theories proposed by G. H. von Wright, R. M. Chisholm, and others can be systematized. Donald Davidson discusses difficulties in specifying the structure of action sentences to elucidate how their meaning depends on that structure. G. H. von Wright devises a method for describing each "state of the world" that results from an action, in a revision of his own earlier work. Additionally, a study of the logic of norms by Alan Ross Anderson is presented as an appendix, along with an appendix by Rescher outlining the aspects of action.

The Logic of Choice Gidon Gottlieb 2019-10-30 Originally published in 1968. This is a critical study of the concept of 'rule' featuring in law, ethics and much philosophical analysis which the author uses to investigate the concept of 'rationality'. The author indicates in what manner the modes of reasoning involved in reliance upon rules are unique and in what fashion they provide an alternative both to the modes of logico-mathematical reasoning and to the modes of scientific reasoning. This prepares the groundwork for a methodology meeting the requirements of the fields using rules such as law and ethics which could be significant for communications theory and the use of computers in normative fields. Other substantive issues related to the mainstream of legal philosophy are discussed - theories of interpretation, the notion of purpose and the requirements of principled decision-making. The book utilizes examples drawn from English and American legal decisions to suggest how the positions of legal positivism and of natural law are equally artificial and misleading.

Logic and Social Choice (RLE Social Theory) Yasusuke Murakami 2014-09-19 How is a social decision made out of individual members' decisions? This is one of the primary questions in the social sciences. Logic and Social Choice provides an answer to the topic by the application of mathematical logic. Yasusuke Murakami formulates social decision-making in logical terms, and shows that an analysis of social decision is equivalent to a logical calculus in many-valued logic. The logical conditions are then derived for various types of societies, especially for democracy. This foundation enables the author to discuss

such topics as the relation between direct democracy and the representative system, a comparison of various rules of election, and the stability of social decision. The main conclusion is that inconsistency or paradox is inherent not only in voting and in democracy itself, but also in any piecemeal social decision-making.

Handbook of Philosophical Logic Dov M. Gabbay 2002-05-31 such questions for centuries (unrestricted by the capabilities of any hardware). The principles governing the interaction of several processes, for example, are abstract and similar to principles governing the cooperation of two large organisations. A detailed rule based effective but rigid bureaucracy is very much similar to a complex computer program handling and manipulating data. My guess is that the principles underlying one are very much the same as those underlying the other. I believe the day is not far away in the future when the computer scientist will wake up one morning with the realisation that he is actually a kind of formal philosopher! The projected number of volumes for this Handbook is about 18. The subject has evolved and its areas have become interrelated to such an extent that it no longer makes sense to dedicate volumes to topics. However, the volumes do follow some natural groupings of chapters. I would like to thank our authors and readers for their contributions and their commitment in making this Handbook a success. Thanks also to our publication administrator Mrs J. Spurr for her usual dedication and excellence and to Kluwer Academic Publishers for their continuing support for the Handbook.

Working with Preferences: Less Is More Souhila Kaci 2011-06-20 Preferences are useful in many real-life problems, guiding human decision making from early childhood up to complex professional and organizational decisions. In artificial intelligence specifically, preferences is a relatively new topic of relevance to nonmonotonic reasoning, multiagent systems, constraint satisfaction, decision making, social choice theory and decision-theoretic planning The first part of this book deals with preference representation, with specific chapters dedicated to representation languages, nonmonotonic logics of preferences, conditional preference networks, positive and negative preferences, and the study of preferences in cognitive psychology. The second part of the book deals with reasoning with preferences, and includes chapters dedicated to preference-based argumentation, preferences database queries, and rank-ordering outcomes and intervals. The author concludes by examining forthcoming research perspectives. This is inherently a multidisciplinary topic and this book will be of interest to computer scientists, economists, operations researchers, mathematicians, logicians, philosophers and psychologists.

The Logic of Preference and Decision Supporting Systems Dragan Cvetković 1993 Abstract: "In this thesis we are exploring some models for von Wright's preference logic. For a given (initial) set of axioms and a set of formulae, some of them valid, some of them problematic (in the sense that it is not always intuitively clear whether they should be valid or not), we investigated some matrix semantics for those formulae including semantics in relevance logics (first degree entailment and RM3), various many-valued (Kleene's, Lukasiewicz's ...) and/or paraconsistent logics, in Sugihara matrix, and one interpretation for preference relation using modal operators [square] and [diamond]. In each case, we also investigated dependence results between various formulae. An opposite problem (i.e. searching for a logic that satisfies given constraints) is also addressed. At the end, a LISP program is presented that implements von Wright's logic as a decision supporting system, i.e. that decides for a given set of preferences, what alternatives (world situation) we should choose, according to von Wright's preference logic system."

Application of Fuzzy Logic to Social Choice Theory John N. Mordeson 2015-03-03 Fuzzy social choice theory is useful for modeling the

uncertainty and imprecision prevalent in social life yet it has been scarcely applied and studied in the social sciences. Filling this gap, *Application of Fuzzy Logic to Social Choice Theory* provides a comprehensive study of fuzzy social choice theory. The book explains the concept of a fuzzy maximal subset of a set of alternatives, fuzzy choice functions, the factorization of a fuzzy preference relation into the "union" (conorm) of a strict fuzzy relation and an indifference operator, fuzzy non-Arrowian results, fuzzy versions of Arrow's theorem, and Black's median voter theorem for fuzzy preferences. It examines how unambiguous and exact choices are generated by fuzzy preferences and whether exact choices induced by fuzzy preferences satisfy certain plausible rationality relations. The authors also extend known Arrowian results involving fuzzy set theory to results involving intuitionistic fuzzy sets as well as the Gibbard-Satterthwaite theorem to the case of fuzzy weak preference relations. The final chapter discusses Georgescu's degree of similarity of two fuzzy choice functions.

Logic of Choice and Economic Theory S. N. Afriat 1987-11-12 This is a definitive statement of Professor Afriat's achievements in the field of choice and value in economics, an area in which he has contributed more than most. As the topics covered, which include optimal programming, social and individual choice, production, and the market, are both central and fundamental, the book forms a source on basic and current topics in economic theory and mathematical economics for any advanced student of the subject. The work is in six parts: the first four discuss generalities about choice and representative economic topics; the final two are more concerned with straight forwardly mathematical subjects that have an application in economics. A characteristic of the book is its conceptual clarifications for choice, value, and price theory generally, and, for special topics, the novelties and simplifications that are uncovered in already well-trodden ground. -

The Logic of Care Annemarie Mol 2008-05-24 **Shortlisted for the BSA Sociology of Health and Illness Book Prize 2010** What is good care? In this innovative and compelling book, Annemarie Mol argues that good care has little to do with 'patient choice' and, therefore, creating more opportunities for patient choice will not improve health care. Although it is possible to treat people who seek professional help as customers or citizens, Mol argues that this undermines ways of thinking and acting crucial to health care. Illustrating the discussion with examples from diabetes clinics and diabetes self care, the book presents the 'logic of care' in a step by step contrast with the 'logic of choice'. She concludes that good care is not a matter of making well argued individual choices but is something that grows out of collaborative and continuing attempts to attune knowledge and technologies to diseased bodies and complex lives. Mol does not criticise the practices she encountered in her field work as messy or ad hoc, but makes explicit what it is that motivates them: an intriguing combination of adaptability and perseverance. *The Logic of Care: Health and the problem of patient choice* is crucial reading for all those interested in the theory and practice of care, including sociologists, anthropologists and health care professionals. It will also speak to policymakers and become a valuable source of inspiration for patient activists.

Fuzzy Preference Modelling and Multicriteria Decision Support J.C. Fodor 2013-03-14 This book provides in-depth coverage of the most important results about fuzzy logic including negations, conjunctions, disjunctions, implications and gives the interrelations between those different connectives. The work brings together multiple results about valued binary relations satisfying diverse transitivity-type conditions. The authors propose the first sound introduction to valued preference modelling through the systematic use of fuzzy set theory and functional equations and derive the possible foundations for multicriteria decision aid using aggregation, ranking and choice procedures on the basis of axiomatic results. The text presents a unified view of various multicriteria decision making tools that have been independently derived in the past, dealing with pairwise comparisons. The monograph is mathematically oriented but the results will be of the greatest interest for engineers and economists who design and implement decision support systems in practice. It is also supplied with a sufficient number of examples to make it attractive to nonspecialists.

Reasoning about Preference Dynamics Fenrong Liu 2011-05-30 Our preferences determine how we act and think, but exactly what the mechanics are and how they work is a central cause of concern in many

disciplines. This book uses techniques from modern logics of information flow and action to develop a unified new theory of what preference is and how it changes. The theory emphasizes reasons for preference, as well as its entanglement with our beliefs. Moreover, the book provides dynamic logical systems which describe the explicit triggers driving preference change, including new information, suggestions, and commands. In sum, the book creates new bridges between many fields, from philosophy and computer science to economics, linguistics, and psychology. For the experienced scholar access to a large body of recent literature is provided and the novice gets a thorough introduction to the action and techniques of dynamic logic.

A Preference-based Theory of Intention Tōkyō Daigaku. Dept. of Information Science 1994 Abstract: "Although there has been much work on the logical formulation of intention, only little attention has been paid on the close relationship between intentions and preferences of an agent. As a result, the previous work cannot properly treat reasoning with information about preferences. In this paper, we investigate a preference-based approach to the logic of intention. Based on an intuition that intentions are propositions preferred by an agent, we define a notion of intention in terms of the preference order of an agent. The definition is a simple and intuitive one, and intentions satisfy good and interesting properties. We formulate a new form of persistency which is a dynamic property of intentions, and show that it characterizes intentions among other choices. Then we explain in our logic an example of reasoning about intentions and preferences. It demonstrates that our formalism can give a good basis for intention/plan recognition models which deal with various kinds of information about an agent's preferences."

The Logics of Preference N.J. Moutafakis 2012-12-06 With characteristic incisiveness Georg Henrik von Wright identifies pro-hairtic logic (i. e. the logic of preference) as the core of a general theory of value concepts. Essentially, this nucleus involves the logical study of acts from the point of view of their preferability. 1 (italics added) Though the term pro-hairesis is found in Plato, as well as in Aristotle's treatment of the relations of preference, it is von Wright who introduces this word into contemporary analytical philosophy, and succinctly specifies the philosophical dimensions it encompasses. The above emphasis upon the philosophical study of the formalization of preferences is a matter of utmost importance for understanding the type of inquiry this investigation attempts to initiate. Over the past one hundred years the literature on general theories of subjective utility has become massive, where one considers the work done in psychometrics, econometrics, statistical theories, probability theories, etc., etc. Histories in these areas are strong in tracing various evolutions in the development of the concept of preference in decision-making. However, what has not been investigated with sustained attention are the fundamentally philosophical inquiries into the formalization of preference-relations.

Revealed Preference Theory Christopher P. Chambers 2016-01-05 The theory of revealed preference has a long, distinguished tradition in economics but lacked a systematic presentation of the theory until now. Preference Change Till Grüne-Yanoff 2009-06-11 Changing preferences is a phenomenon often invoked but rarely properly accounted for. Throughout the history of the social sciences, researchers have come against the possibility that their subjects' preferences were affected by the phenomenon to be explained or by other factors not taken into account in the explanation. Sporadically, attempts have been made to systematically investigate these influences, but none of these seems to have had a lasting impact. Today we are still not much further with respect to preference change than we were at the middle of the last century. This anthology hopes to provide a new impulse for research into this important subject. In particular, we have chosen two routes to amplify this impulse. First, we stress the use of modelling techniques familiar from economics and decision theory. Instead of constructing complex, all-encompassing theories of preference change, the authors of this volume start with very simple, formal accounts of some possible and hopefully plausible mechanism of preference change. Eventually, these models

may find their way into larger, empirically adequate theories, but at this stage, we think that the most important work lies in building structure. Secondly, we stress the importance of interdisciplinary exchange. Only by drawing together experts from different fields can the complex empirical and theoretical issues in the modelling of preference change be adequately investigated.

Modal Logic for Belief and Preference Change Patrick Girard 2008
In my thesis, I show that Order Logic interpreted over preorders provides a unifying framework for individuals and groups to analyze belief and preference change. Order Logic is a modal logic with three modalities complete for the class of transitive and reflexive frames whose fragments and extensions yield various formalisms to analyze the dynamics of beliefs and preferences. The analysis proceeds in two steps: (1) I give static logics for belief and preference and (2) I introduce dynamic modalities to analyze actions over models. I investigate four kinds of doxastic and preference logics: Relational Doxastic Logic, Binary Preference Logic, Ceteris Paribus Logic and Group Order Logic. The actions I consider are of two kinds. In a first time, I integrate three well-known dynamic actions. The first one is public announcement, the second lexicographic upgrade and the last preference upgrade, exemplifying state elimination, state reordering and link cutting respectively. In a second time, I introduce new kinds of actions: agenda expansion and agent promotion. All actions are incorporated into static logics via compositional analysis, appealing to reduction axioms. This uniform completeness strategy consists in giving axioms that transform formulas with action modalities to equivalent formulas in the static language, reducing completeness of the dynamic logic to that of the static one.

A Logic of Expressive Choice Alexander A. Schuessler 2020-12-08
Alexander Schuessler has done what many deemed impossible: he has wedded rational choice theory and the concerns of social theory and anthropology to explain why people vote. The "paradox of participation"—why individuals cast ballots when they have virtually no effect on electoral outcomes—has long puzzled social scientists. And it has particularly troubled rational choice theorists, who like to describe political activity in terms of incentives. Schuessler's ingenious solution is a "logic of expressive choice." He argues in incentive-based (or "economic") terms that individuals vote not because of how they believe their vote matters in the final tally but rather to express their preferences, allegiances, and thus themselves. Through a comparative history of marketing and campaigning, Schuessler generates a "jukebox model" of participation and shows that expressive choice has become a target for those eliciting mass participation and public support. Political advisers, for example, have learned to target voters' desire to express—to themselves and to others—who they are. Candidates, using tactics such as claiming popularity, invoking lifestyle, using ambiguous campaign themes, and shielding supporters from one another can get out their vote even when it is clear that an election is already lost or won. This important work, the first of its kind, will appeal to anyone seeking to decipher voter choice and turnout, social movements, political identification, collective action, and consumer behavior, including scholars, graduate students, and upper-level undergraduates in political science, economics, sociology, anthropology, and marketing. It will contribute greatly to our understanding and prediction of democratic participation patterns and their consequences.

Handbook of Philosophical Logic Dov M. Gabbay 2018-10-19
This eighteenth volume of the acclaimed *Handbook of Philosophical Logic* includes many contributors who are among the most famous leading figures of applied philosophical logic of our time. Coverage includes deontic logic, practical reasoning, homogeneous and heterogeneous logical proportion, and talmudic logic. Overall, it will appeal to students, practitioners, and researchers looking for an authoritative resource in these areas. The contributors first explore models in terms of dynamic logics for information-driven agency. The paradigm they use is dynamic-epistemic logics for knowledge and belief and their current extensions to the statics and dynamics of agents' preferences. Next, in the presentation of preference based agency, coverage examines a large number of themes, including interactive social agents and scenarios with

long term patterns emerging over time. From here, the book moves on to offer an introduction to homogeneous and heterogeneous logical proportions. Readers will also learn more about the general challenge that the problem of formalizing practical reasoning presents to logical theory. The contributors survey the existing resources that might contribute to the development of such a formalization. They conclude that, while a robust, adequate logic of practical reasoning is not yet in place, the materials for developing such a logic are now available. The last chapter explores topics that deal with the logic of Jewish law and the logic of the Talmud. This includes obligations and prohibitions in Talmudic deontic logic, the handling of loops in Talmudic logic, Temporal Talmudic logic, and quantum states and disjunctive attacks in Talmudic logic. The Talmudic logic system presented are also exported to general logic and to Artificial Intelligence.

Philosophical Logic G. H. von Wright 2018-05-31
For the last 25 years, since publication of his *Logical Studies*, Professor Von Wright has steadily explored the field of philosophical logic. The concept of negation, logical paradoxes, the puzzles connected with evidence and probability in confirmation theory, the interrelatedness of the ideas of time and change, and the clarification of the structure of temporal and spatial orderings are among the many areas he has profitably investigated.
