30 Essential Skills for the Qualitative Researcher John W. Creswell 2020-08-06 The Second Edition of 30 Essential Skills for the Qualitative Researcher provides practical, applied information for the novice qualitative researcher, addressing the "how" of conducting qualitative research in one brief guide. Author John W. Creswell and new co-author Johanna Creswell Báez draw on many examples from their own research experiences, sharing them throughout the book. The 30 listed skills are competencies that can help qualitative researchers conduct more thorough, more rigorous, and more efficient qualitative studies. Innovative chapters on thinking like a qualitative research and engaging with the emotional side of doing qualitative research go beyond the topics of a traditional research methods text and offer crucial support for qualitative practitioners. By starting with a strong foundation of a skills-based approach to qualitative research, readers can continue to develop their skills over the course of a career in research. This revised edition updates skills to follow the research process, using new research from a wide variety of disciplines like social work and sociology as examples. Chapters on research designs now tie back explicitly to the five approaches to qualitative research so readers can better integrate their new skills into these designs. Additional figures and tables help readers better visualize data collection through focus groups and interviews and better organize and implement validity checks. The new edition provides further examples on how to incorporate reflexivity into a study, illuminating a challenging aspect of qualitative research. Information on writing habits now addresses co-authorship and provides more context and variation from the two authors.

Ecodocumentaries Rayson K. Alex 2016-11-15 This book features ten critical essays on ecodocumentaries written by eminent scholars from India, USA, Ireland, Finland and Turkey in the area of ecocinema studies. Situating social documentaries with explicit ecological form and content, the volume takes relational positions on political, cultural and conservational aspects of natures and cultures in various cultural contexts. Documentaries themed around issues such as electronic waste, animal rights, land ethics, pollution of river, land grabbing, development and exotic plants are some of the topics ecocritiqued in this volume.

Imagining Head-Smashed-In Jack Brink 2008 "At the place known as Head-Smashed-In in southwestern Alberta, Aboriginal people practiced a form of group hunting for nearly 6,000 years before European contact. The large communal bison traps of the Plains were the single greatest food-getting method ever developed in human history. Hunters, working with their knowledge of the land and of buffalo behaviour, drove their quarry over a cliff and into wooden corrals. The rest of the group butchered the kill in the camp below.

Death of a River Guide Richard Flanagan 2014-05-13 "Death of a River Guide makes good on a truly soaring ambition and flirts with literary greatness. . . . An indelible vision of how surely the history of a land plays its part in shaping the interior landscape of the human beings who occupy it." —The Chicago Tribune With *Death of a River Guide*, Richard Flanagan gives us an extraordinary novel as sprawling and compelling as the land and people it describes. Beneath a waterfall on a remote Tasmanian river, Aljaz Cosini is drowning.

Beset by visions, he relives not just his own life but that of his family and forebears. He sees his father, Harry, burying his own father, Boy. He sees Boy himself as a young man, and his Auntie Ellie, chased by a cow she believes is a Werowa spirit. In the waters that rush over him Aljaz finds a world where his story connects to family stories that are Aboriginal, Celtic, Italian, English, Chinese, and East European—what he ultimately discovers in the flood of the past is the soul history of his country.

Reading the Entrails Norman Charles Conrad 1999 Before the Fall of Imperial Rome, priests cast the internal organs of sacrificial animals on temple floors, claiming to be able to divine the future from these entrails. By probing the remains of Alberta's past sacrifices -- reading her entrails -- Norman Conrad believes that we might dimly see at apparition of Alberta's future. This controversial book vividly portrays the history of land and life in Alberta, from the Ice Ages to the present. Making no apology for his criticism of government, regulators and large corporations, Norman Conrad makes a strident plea for Alberta's dangerously imperiled environment and presents a model that can be applied anywhere.

Invested Indifference Kara Granzow 2020-06-15 In 2004, Amnesty International characterized Canadian society as "indifferent" to high rates of violence against Indigenous women and girls. When the Canadian government took another twelve years to launch a national inquiry, that indictment seemed true. *Invested Indifference* makes a startling counter-argument: that what we see as societal unresponsiveness doesn't come from an absence of feeling but from an affective investment in framing specific lives as disposable. Kara Granzow demonstrates that mechanisms such as the law, medicine, and control of land and space have been used to entrench violence against Indigenous people in the social construction of Canadian nationhood.

Ecocriticism and the Anthropocene in Nineteenth-Century Art and Visual Culture Maura Coughlin 2019-09-24 In this volume, emerging and established scholars bring ethical and political concerns for the environment, nonhuman animals and social justice to the study of nineteenth-century visual culture. They draw their theoretical inspiration from the vitality of emerging critical discourses, such as new materialism, ecofeminism, critical animal studies, food studies, object-oriented ontology and affect theory. This timely volume looks back at the early decades of the Anthropocene to query the agency of visual culture to critique, create and maintain more resilient and biologically diverse local and global ecologies.

Climate and History T. M. L. Wigley 1985-10-17 This highly successful book is a collection of twenty papers, specially written by research workers in the many relevant disciplines. First published in 1985, it was the first major survey of both the methodology of climatic reconstruction and the problem of climate/history interactions, and embodies the results of fruitful co-operation between historians, archaeologists and scientists. It discusses: the climatic information obtainable from the study of chemical isotopes, glaciers, pollen remains, tree rings, archaeological materials and documentary sources; the theoretical and methodological problems involved in assessing the impact of climate and climatic change on past societies; and provides a series of case studies arguing for or against the importance of climatic factors in human affairs in specific economic, social and cultural contexts.

Ranching Women in Southern Alberta Rachel Herbert 2017 "This book delves into the complex, compelling and seldom explored history of southern Albertan ranch women. Spanning the years 1880-1930, this book sheds light on the significant roles ranch women played in the evolution of the Alberta agricultural industry. The book encapsulates an era of change on the Prairies, from the time of large cattle operations covering thousands of acres to family-owned ranches that subsisted on much less, but with arguably greater success. The role women played in ensuring the economic viability and social harmony of their families, ranches and communities should not be underestimated. Having to shoulder a variety of tasks and roles, ranch women of this era, while perhaps having more freedom and independence than their urban or European counterparts, faced a myriad of challenges. For some, these previously unimaginable challenges proved too much, but for others, it was simply part of the adventure. This book pays homage to the brave and talented women who rode out in the hills, carving out a role for themselves, during the dawn of the family ranching era."-- Provided by publisher.

Washakie Grace Raymond Hebard 1995-01-01 Washakie was chief of the eastern band of the Shoshone Indians for almost sixty years, until his death in 1900. A strong leader of his own people, he saw the wisdom of befriending the whites. Grace Raymond Hebard offers an engaging view of Washakie's long life and the early history of Shoshone-occupied land—embracing present-day Wyoming and parts of Montana, Idaho, and Utah. Washakie is seen signing historic treaties, aiding overland emigrants in the 1850s, and finally assisting whites in fighting the Sioux. According to Hebard, Washakie's role in the battle on the Rosebud in June 1876 saved General Crook from the fate that befell General Custer eight days later on the Little Big Horn.

Discard Studies Max Liboiron 2022-05-24 An argument that social, political, and economic systems maintain power by discarding certain people, places, and things. Discard studies is an emerging field that looks at waste and wasting broadly construed. Rather than focusing on waste and trash as the primary objects of study, discard studies looks at wider systems of waste and wasting to explore how some materials, practices, regions, and people are valued or devalued, becoming dominant or disposable. In this book, Max Liboiron and Josh Lepawsky argue that social, political, and economic systems maintain power by discarding certain people, places, and things. They show how the theories and methods of discard studies can be applied in a variety of cases, many of which do not involve waste, trash, or pollution. Liboiron and Lepawsky consider the partiality of knowledge and offer a theory of scale, exploring the myth that most waste is municipal solid waste produced by consumers; discuss peripheries, centers, and power, using content moderation as an example of how dominant systems find ways to discard; and use theories of difference to show that universalism, stereotypes, and inclusion all have politics of discard and even purification—as exemplified in “inclusive” efforts to broaden the Black Lives Matter movement. Finally, they develop a theory of change by considering “wasting well,” outlining techniques, methods, and

propositions for a justice-oriented discard studies that keeps power in view.

The Oldest Trick in the Book Ben M. Debney 2020-07-03 This book investigates the normalisation of blame-shifting within ideological discourse as a broad feature of history, working from Churchill's truism that history is written by the victors. To that end, it explores historical episodes of political persecution carried out under cover of moral panic, highlighting the process of 'Othering' common to each and theorising a historical model of panic-driven scapegoating from the results. Building this model from case studies in witch panic, communist panic and terrorist panic respectively, *The Oldest Trick in the Book* builds an argument that features common to each case study reflect broader historical patterning consistent with Churchill's maxim. On this basis it argues that the periodic construction of bogeymen or 'folk demons' is a useful device for enabling the kind of victim-playing and victim-blaming critical to protecting elite privilege during periods of crisis and that in being a recurring theme historically, panic-driven scapegoating retains great ongoing value to the privileged and powerful, and thus conspicuously remains an ongoing feature of world politics.

By probing the remains of Alberta's past sacrifices (reading the entrails), the author believes we might dimly see an apparition of Alberta's future. *Reading the Entrails: An Alberta Ecohistory* vividly portrays the history of land and life in Alberta from the Ice Ages to the present. Making no apologies for his criticism of government, regulators, and large corporations, Conrad aims to strike a discussion at all levels by presenting his arguments intensely. For those interested in natural history, the environment, and the future of Alberta's ecological resources, this provocative book is essential reading.

Neighbours and Networks William Keith Regular 2009 *Neighbours and Networks* explores the economic relationship that existed between the Blood Indian reserve and the surrounding region of southern Alberta between 1884 and 1939. The Blood tribe, though living on a reserve, refused to become economically isolated from the larger community and indeed became significant contributors to the economy of the area. Their land base was important to the ranching industry. Their products, especially coal and hay, were sought after by settlers, and the Bloods were encouraged not only to provide them as needed, but also to become expert freighters, transporting goods from the reserve for non-Native business people. Blood field labour in the Raymond area's sugar beet fields was at times critical to the functioning of that industry. In addition, the Bloods' ties to the merchant community, especially in Cardston and Fort Macleod, resulted in a significant infusion of money into the local economy. Keith Regular's study fills the gap left by Canadian historiography that has largely ignored the economic associations between Natives and non-Natives living in a common environment. His microhistory refutes the perception that Native reserves have played only a minor role in regional development, and provides an excellent example of a cross-cultural, co-operative economic relationship in the post-treaty period on the Canadian plains.

Big Sur Jack Kerouac 2020-01-28 Driven mad by three years of endless telegrams, phone calls, mail, and reporters in the wake of the success of *On the Road*, Jack Kerouac needed peace, quiet, sobriety, and solitude, so he withdrew to a cabin in Big Sur on the Californian coast. Amid the wild beauty of the landscape, Kerouac struggled to come to terms with his own myth and its malign impact on his life. The result is *Big Sur*, a moving, gritty, and uninhibited autobiographical account of a man struggling with inner demons, blessed by talent and cursed with an urge towards self-destruction—a path lined with bourbon, Manhattans, and scotch. Searingly honest and raw, *Big Sur* shows a man coming to terms with fame, himself, and the world. The Beaver Hills Country Graham MacDonald 2009 This book explores a relatively small, but interesting and anomalous, region of Alberta between the North Saskatchewan and the Battle Rivers. Ecological themes, such as climatic cycles, ground water availability, vegetation succession and the response of

wildlife, and the impact of fires, shape the possibilities and provide the challenges to those who have called the region home or used its varied resources: Indians, Metis, and European immigrants.

Archaeology of Piedra Museo Locality Laura Miotti 2022-03-19 This book highlights the knowledge about landscapes and characteristics of the earliest hunter-gatherer lifeway in Southern Patagonia. It presents an analysis of the archaeological investigations carried out during three decades by an interdisciplinary team that involved archaeologists, anthropologists, paleontologists, geologists and specialists in pollen and diatoms. The database yielded was recovered from systematic survey and excavations from the Pleistocene and Holocene stratigraphic layers of the rockshelter known as AEP-1, Piedra Museo Locality, situated in the central plateau of Santa Cruz Province, Argentina. Piedra Museo is a unique place in the world of high academic interest with some of the earliest archaeological remains in the Americas. Researchers defined two strata and several Stratigraphic units in the site based on the sedimentological and pedological characteristics. The depositional zones contain archaeological remains that are interpreted as hunting events corresponding to two main different occasions in the human colonization of the region, and a third human occupation during the Middle Holocene. Last one occurred then of the massive rockshelter roof collapse. The faunal remains led to a new approach to the palaeoenvironmental evolution of this enclosed basin. This volume describes the management of lithic raw materials and social networks from first human occupation of the Patagonian region to territorial consolidation of hunter-gatherer societies.

British Imperialism P.J. Cain 2016-03-02 A milestone in the understanding of British history and imperialism, this ground-breaking book radically reinterprets the course of modern economic development and the causes of overseas expansion during the past three centuries. Employing their concept of 'gentlemanly capitalism', the authors draw imperial and domestic British history together to show how the shape of the nation and its economy depended on international and imperial ties, and how these ties were undone to produce the post-colonial world of today. Containing a significantly expanded and updated Foreword and Afterword, this third edition assesses the development of the debate since the book's original publication, discusses the imperial era in the context of the controversy over globalization, and shows how the study of the age of empires remains relevant to understanding the post-colonial world. Covering the full extent of the British empire from China to South America and taking a broad chronological view from the seventeenth century to post-imperial Britain today, *British Imperialism: 1688-2015* is the perfect read for all students of imperial and global history.

Quaternary Extinctions Paul S. Martin 1989-01-01 What caused the extinction of so many animals at or near the end of the Pleistocene? Was it overkill by human hunters, the result of a major climatic change or was it just a part of some massive evolutionary turnover? Questions such as these have plagued scientists for over one hundred years and are still being heatedly debated today. *Quaternary Extinctions* presents the latest and most comprehensive examination of these questions. "Geological Magazine "May be regarded as a kind of standard encyclopedia for Pleistocene vertebrate paleontology for years to come." "American Scientist "Should be read by paleobiologists, biologists, wildlife managers, ecologists, archeologists, and anyone concerned about the ongoing extinction of plants and animals." "Science "Uncommonly readable and varied for watchers of paleontology and the rise of humankind." "Scientific American "Represents a quantum leap in our knowledge of Pleistocene and Holocene palaeobiology. . . . Many volumes on our bookshelves are destined to gather dust rather than attention. But not this one." "Nature "Two strong impressions prevail when first looking into this epic compendium. One is the judicious balance of views that range over the whole continuum between monocausal, cultural, or environmental explanations. The second is that both the data base and theoretical sophistication of the protagonists in the debate have improved by a quantum leap since 1967." "American Anthropologist

Sturgeons and Paddlefish of North America G.T.O LeBreton 2006-01-20 Modern North American

sturgeons and paddlefish are the result of 100 million years of evolution. Once an integral part of aboriginal culture, their numbers were decimated by overfishing and habitat destruction during the past two centuries. This book details the extensive science aimed at helping these remarkable species recover from the brink of extinction, and describes the historical, biological, and ecological importance of North American sturgeon and paddlefish. The text is enhanced by photographs and detailed line drawings. This comprehensive volume will be an invaluable resource for researchers, educators, and consultants, in academic and government settings, who work to further scientific understanding of these fishes. No other single compilation has documented current information in such detail.

Orange Chinook Duane Bratt 2019-01-31 In 2015, the New Democratic Party won an unprecedented victory in Alberta. Unseating the Progressive Conservatives -- who had won every provincial election since 1971 -- they formed an NDP government for the first time in the history of the province. *Orange Chinook* is the first scholarly analysis of this election. It examines the legacy of the Progressive Conservative dynasty, the PC and NDP campaigns, polling, and online politics, providing context and setting the stage. It highlights the importance of Alberta's energy sector and how it relates to provincial politics with focus on the oil sands, the carbon tax, and pipelines. Examining the NDP in power, *Orange Chinook* draws on Indigenous, urban, and rural perspectives to explore the transition process and government finances and politics. It explores the governing style of premier Rachel Notley, paying special attention to her response to the 2016 For McMurray wildfire and to the role of women in politics. *Orange Chinook* brings together Alberta's top political watchers in this fascinating, multi-faceted analysis.

High Mountain Conservation in a Changing World Jordi Catalan 2017-08-03 This book provides case studies and general views of the main processes involved in the ecosystem shifts occurring in the high mountains and analyses the implications for nature conservation. Case studies from the Pyrenees are preponderant, with a comprehensive set of mountain ranges surrounded by highly populated lowland areas also being considered. The introductory and closing chapters will summarise the main challenges that nature conservation may face in mountain areas under the environmental shifting conditions. Further chapters put forward approaches from environmental geography, functional ecology, biogeography, and palaeoenvironmental reconstructions. Organisms from microbes to large carnivores, and ecosystems from lakes to forest will be considered. This interdisciplinary book will appeal to researchers in mountain ecosystems, students and nature professionals. This book is open access under a CC BY license.

Ecopsychology Revisited Jorge Conesa-Sevilla 2019-06-04 *Ecopsychology Revisited* is a critique of and deconstructive approach to several trends termed "ecopsychology." This work attempts to bring light to some of the misconceptions that have hardened as "ecopsychology," as these ideas have been reinterpreted and sometimes oversimplified by the general public and some professionals outside mainstream psychology. Part of the confusion arose when "ecopsychology" became inadequately amalgamated with other ideas. Nevertheless, within the social and behavioral sciences, at least, there is great value in devising and applying evidence-based strategies that track the normative ramifications dealing with cognition, emotion and behavior, exploring how or why humans relate to natural processes in a wide range of ways.
