Geostatistics Jean-Paul Chilès
2012-02-08 Praise for the First Edition ". . . a readable, comprehensive volume that . . . belongs on the desk, close at hand, of any serious researcher

or practitioner."

—Mathematical Geosciences

The state of the art in geostatistics Geostatistical models and techniques such as kriging and stochastic multi-realizations exploit spatial correlations to evaluate natural resources, help optimize their development, and address environmental issues related to air and water quality, soil pollution, and forestry. Geostatistics: Modeling Spatial Uncertainty, Second Edition presents a comprehensive, up-to-date reference on the topic, now featuring the latest developments in the field. The authors explain both the theory and applications of geostatistics through a unified treatment that emphasizes methodology. Key topics that are the foundation of geostatistics are explored in-depth, including stationary and nonstationary models; linear and nonlinear methods; change of support; multivariate approaches; and conditional simulations. The Second Edition highlights the growing number

of applications of geostatistical methods and discusses three key areas of growth in the field: New results and methods, including kriging very large datasets; kriging with outliers; nonseparable space-time covariances; multipoint simulations; pluri-gaussian simulations; gradual deformation; and extreme value geostatistics. Newly formed connections between geostatistics and other approaches such as radial basis functions, Gaussian Markov random fields, and data assimilation. New perspectives on topics such as collocated cokriging, kriging with an external drift, discrete Gaussian change-of-support models, and simulation algorithms. Geostatistics, Second Edition is an excellent book for courses on the topic at the graduate level. It also serves as an invaluable reference for earth scientists, mining and petroleum engineers, geophysicists, and environmental statisticians who collect and analyze data in

their everyday work.

Basement Tectonics 8 Mervin J.

Bartholomew 2012-12-06 The

8th International Conference

on Basement Tectonics was

held in Butte, Montana, August

8-12,1988. Historically,

basement tectonics

conferences have focused on

such topics as reactivation of

faults, the influence of

basement faults on

metallogeny and hydrocarbon

accumulation, and the use of

geophysical and remote

sensing techniques to interpret

subsurface and surface

geology. The 8th Conference

diverged from past conferences

in that a unifying theme was

selected. Because ancient

major terrane or cratonic

boundaries are often

postulated to be fault zones

which are subsequently

reactivated, the conference

was organized to examine all

aspects of ancient continental

margins and terrane

boundaries and to compare

younger (Mesozoic) ones,

about which more is known,

with older (Paleozoic and

Precambrian) ones. Moreover,

because the 8th Conference

was held in the northwestern

United States, a greater

emphasis was placed on the

Mesozoic margin of western

North America and the North

American shield. The seven

oral sessions and four poster

sessions all dealt with aspects

of the conference theme:

characterization and

comparison of ancient

continental margins. The

organizers extend their thanks

to those individuals who

graciously consented to serve

as moderators for the oral

sessions: John M. Bartley, Mark

S. Gettings, M. Charles Gilbert,

John M. Guilbert, Donald W.

Hyndman, William P. Leeman,

Robert Mason, and A. Krishna

Sinha. The program with

abstracts volume was prepared by S. E. Lewis and M. J. Bartholomew.
