Top Incomes Over the

Twentieth Century A. B.

Atkinson 2007-05-10 Based on

a pioneering research

programme on the evolution of top incomes, this volume brings together studies from 10 OECD countries. This rapidly growing field of economic research investigates the top segment of the income distribution by using data from income tax records over the past century. As well as describing the source data and

methods employed, the authors also discuss the dramatic changes that have occurred at the top of the income scale throughout the 20th century. This fascinating study is the first of its kind to provide a comprehensive historic overview of top income distribution over the last century. It looks at why top incomes shares fell markedly in the first half of the 20th century and why, more recently, there has been a striking difference in the top income distribution between continental Europe and English-speaking OECD countries, like the UK, USA, and Australia. Written by the top names in the field, this seminal work provides rich pickings for those with an interest in inequality, development, the economic impact of war, taxation, economic history, and executive compensation.

Glosario Del Banco Mundial World Bank 1996 This edition of the World Bank has been revised and expanded by the Terminology Unit in the Languages Services Division of the World Bank in collaboration with the English, Spanish, and French Translation Sections. The Glossary is intended to assist the Bank's translators and interpreters, other Bank staff using French and Spanish in their work, and free-lance translator's and interpreters employed by the Bank. For this reason, the Glossary contains not only financial and economic terminology and terms relating to the Bank's procedures and practices, but also terms that frequently occur in Bank documents, and others for which the Bank has a preferred equivalent. Although many of these terms, relating to such

fields as agriculture, education, energy, housing, law, technology, and transportation, could be found in other sources, they have been assembled here for ease of reference. A list of acronyms occurring frequently in Bank texts (the terms to which they refer being found in the Glossary) and a list of international, regional, and national organizations will be found at the end of the Glossary.

World Inequality Report 2018

Facundo Alvaredo 2018 World Inequality Report 2018 is the most authoritative and up-to-date account of global trends in inequality. Researched, compiled, and written by a team of the world's leading economists of inequality, it presents--with unrivaled clarity and depth--information and analysis that will be vital to policy makers and scholars everywhere. Inequality has taken center stage in public debate as the wealthiest people

in most parts of the world have seen their share of the economy soar relative to that of others, many of whom, especially in the West, have experienced stagnation. The resulting political and social pressures have posed harsh new challenges for governments and created a pressing demand for reliable data. The World Inequality Lab at the Paris School of Economics and the University of California, Berkeley, has answered this call by coordinating research into the latest trends in the accumulation and distribution of income and wealth on every continent. This inaugural report analyzes the Lab's findings, which include data from major countries where information has traditionally been difficult to acquire, such as China, India, and Brazil. Among nations, inequality has been decreasing as traditionally poor countries' economies have caught up with the West. The report shows, however, that inequality has been steadily deepening within

almost every nation, though national trajectories vary, suggesting the importance of institutional and policy frameworks in shaping inequality. World Inequality Report 2018 will be a key document for anyone concerned about one of the most imperative and contentious subjects in contemporary politics and economics.

Residence of Individuals Under Tax Treaties and EC Law

Guglielmo Maisto 2010 This book deals comprehensively with the problems raised by

residence of individuals for tax purposes. It begins with an overview of residence of individuals in private international law, with a particular emphasis on general principles on residence and conflict of law rules. It then examines issues raised by residence of individuals in EC (non-tax) law. Individual country surveys provide in-depth analyses from a national viewpoint. The following countries are discussed: Australia, Austria, Belgium, Canada, France, Germany, Italy, Japan, Netherlands, Spain, Switzerland and United Kingdom.

World Development Report

2019 World Bank 2018-10-31

Work is constantly reshaped by technological progress. New ways of production are adopted, markets expand, and societies evolve. But some changes provoke more attention than others, in part due to the vast uncertainty

involved in making predictions about the future. The 2019 World Development Report will study how the nature of work is changing as a result of advances in technology today. Technological progress disrupts existing systems. A new social contract is needed to smooth the transition and guard against rising inequality. Significant investments in human capital throughout a person's lifecycle are vital to this effort. If workers are to stay competitive against machines they need to train or retool existing skills. A social protection system that includes a minimum basic level of protection for workers and citizens can complement new forms of employment. Improved private sector policies to encourage startup activity and competition can help countries compete in the digital age. Governments also need to ensure that firms pay their fair share of taxes, in part to fund this new social contract. The 2019 World Development Report presents an analysis of these issues

based upon the available evidence.

A Theory of Constitutional Rights Robert Alexy 2010 In any country where there is a Bill of Rights, constitutional rights reasoning is an important part of the legal process. As more and more countries adopt Human Rights legislation and accede to international human rights agreements, and as the European Union introduces its own Bill of Rights, judges struggle to implement these rights consistently and sometimes the reasoning behind them is lost. Examining the practice in other jurisdictions can be a valuable guide. Robert Alexy's classic work reconstructs the reasoning behind the jurisprudence of the German Basic Law and in doing so provides a theory of general application to all jurisdictions where judges wrestle with rights adjudication. In considering the features of constitutional rights reasoning, the author moves from the

doctrine of proportionality, procedural rights and the structure and scope of constitutional rights, to general rights of liberty and equality and the problem of horizontal effect. A postscript written for the English edition considers critiques of the Theory since it first appeared in 1985, focusing in particular on the discretion left to legislatures and in an extended introduction the translator argues that the theory may be used to clarify the nature of legal reasoning in the context of rights under the British Constitution. This book will be of central interest to all legal and constitutional theorists and human rights scholars.

Top Incomes A. B. Atkinson 2010-04-01 A rapidly growing area of economic research investigates the top of the income distribution using data from income tax records. This volume brings together studies of top incomes for twelve countries from around the world, including China, India, Japan, Argentina and Indonesia. Together with the

first volume, published in 2007, the studies cover twenty two countries. They have a long time span, the earliest data relating to 1875 (for Norway), allowing recent developments to be placed in historical perspective. The volume describes in detail the source data and the methods employed. It will be an invaluable reference source for researchers in the field. Individual country chapters deal with the specific nature of the data for each of the countries, and describe the long-term evolution of top income shares. In the countries as a whole, dramatic changes have taken place at the top of the income distribution. Over the first part of the century, top income shares fell markedly. This largely took the form of a reduction in capital incomes. The different authors examine the impact of the First and Second World Wars, contrasting countries that were and were not engaged. They consider the impact of depressions and banking crises, and pay particular

attention to the impact of progressive taxation. In the last 30 years, the shares of top incomes have increased markedly in the US and other Anglo-Saxon countries, reflecting the increased dispersion of earnings. The volume includes statistics on the much-discussed top pay and bonuses, providing a global perspective that discusses important differences between countries such as the lesser increase in Continental Europe. This book, together with volume 1, documents this interesting development and explores the underlying causes. The findings are brought together in a final summary chapter by Atkinson, Piketty and Saez.

Ethnicity, Markets, and Migration in the Andes

Brooke Larson 1995 "Major compilation of historical and anthropological articles focuses on the nature of markets and exchange structures in the Andes. Prominent scholars explore Andean participation in the European market structure, the influence of migration in changing ethnic boundaries and spheres of exchange, and the politics of market exchange during the colonial period.

Larson's introduction places articles within the context of Andean economic systems,

while Harris concludes with an appreciation of the relationships between mestizo and indigenous ethnic identities in the context of market relations. Both introduction and conclusion lend a greater coherence to this carefully-crafted and monumental volume"--

A Guide to Estimating the Impact of Fiscal Policy on Inequality and Poverty (Brookings Institution Press and CEQ Institute-Tulane University) is a unique manual detailing the theory and practical methods developed by the Commitment to Equity Institute at Tulane University for determining the impact of taxation and public spending on inequality and poverty. Policymakers, social planners, and economists are presented with a step-by-step guide to applying fiscal incidence analysis as well as country studies to illustrate. The 2nd edition of the Handbook has two volumes. Volume 1 is comprised of Part I, Methodology, describes what a CEQ Assessment© is and presents the theoretical underpinnings of fiscal incidence analysis and the indicators used to assess the distributive impact and effectiveness of fiscal policy. Part II, Implementation, presents the methodology on how taxes, subsidies, and social spending should be allocated.

It includes a step-by step guide to completing the CEQ Master Workbook©, a multi-sheet Excel file that houses detailed information on the country's fiscal system and the results used as inputs for policy discussions, academic papers, and policy reports. Part III, "Applications," presents applications of the CEQ framework to low- and middle-income countries and includes simulations of policy reforms. In this 2nd edition, chapters 1, 6, and 8 have been significantly updated and two new country studies have been added to Part III. Parts IV (updated), V (new), and VI (new) are available online only. Part IV contains the CEQ Assessment's main tools. Part V includes the databases housed in the CEQ Data Center on Fiscal Redistribution. Part VI contains the CEQ Institute's microsimulation tools. Volume 2 (new) includes a collection of chapters whose purpose is to expand the knowledge and methodological frontiers to sharpen even further the analysis of fiscal policy's

redistributive impact. Topics include: alternative approaches to value in-kind education and health services; alternative methods to evaluate spending on infrastructure; corporate taxes and taxation on capital incomes; inter-temporal fiscal incidence and the redistributive consequences of social insurance pensions; fiscal redistribution, macroeconomic stability and growth; and, the political economy of fiscal redistribution.

Theory of Legal Principles

Humberto Avila 2007-09-26
This book examines the distinction between principles and rules so that they can be better understood and applied.

It structures the distinction between principles and rules on different foundations than those jurisprudence ordinarily employs. It also proposes a new model to explain the normative species, which includes structured weighing on the application process while encompassing substantive criteria of justice in its argument.

Social Panorama of Latin America 2014

United Nations Economic Commission for Latin America and the Caribbean
2014-12-31 The 2014 edition of Social Panorama of Latin America presents ECLAC measurements for the analysis of income poverty, taking, as well, a multidimensional

approach to poverty. Applying these two approaches to data for the countries of the region provides confirmation that despite the progress made over the past decade, structural poverty is still a feature of Latin American society. In order to contribute to a more comprehensive design of public policies aimed at overcoming poverty and socioeconomic inequality, this edition examines recent trends in social spending and sets out a deeper gap analysis focused on three areas: youth and development, gender inequality in the labour market and urban residential segregation.

Population Aging and the Generational Economy Ronald Demos Lee 2011-01-01 'While there already exists a crowded body of publications addressing the effect of an aging population on the economy, this monograph is most outstanding in presenting a global, in-depth analysis of the implications thereby generated for 23 developed and developing countries. . . Scholars, researchers, and

practitioners everywhere will benefit immensely from this comprehensive work.' - H.I. Liebling, Choice 'Ron Lee and Andrew Mason's *Population Aging and the Generational Economy* is a demographic and economic tour-de-force. Their collaborative, intercontinental. . . study of aging, consumption, labor supply, saving, and private and public transfers is the place to go to understand global aging and its myriad and significant economic challenges and opportunities.' - Laurence Kotlikoff, Boston University, US 'The culmination of. . . work by Lee, Mason, and their collaborators from around the world to extend Samuelson's framework to accommodate realistic demography, empirical measurement of age-specific earnings, consumption, tax payments, and benefit receipts, the studies. . . demonstrate the power of this integrated economic-demographic framework to advance our understanding of critical public policy challenges faced by countries at different stages of

demographic transition and population aging.' - Robert Willis, University of Michigan, US 'Lee and Mason have done scholars and practitioners a magnificent service by undertaking this comprehensive, compelling, and supremely innovative examination of the economic consequences of changes in population age structure. The book is a bona fide crystal ball. It will be a MUST READ for the next decade!' - David Bloom, Harvard School of Public Health, US 'Population Aging and the Generational Economy provides an encompassing account of what we know about population aging and the impact that this process will have on our economies. It does not confine itself to the advanced industrial countries, where aging has already been largely studied, but adopts a truly global perspective. I am sure it will become a key reference for researchers, students and those involved in policy-making in areas that are affected by population aging.' - Giuliano Bonoli, Swiss

Graduate School of Public Administration (IDHEAP), Switzerland Over coming decades, changes in population age structure will have profound implications for the macroeconomy, influencing economic growth, generational equity, human capital, saving and investment, and the sustainability of public and private transfer systems. How the future unfolds will depend on key actors in the generational economy: governments, families, financial institutions, and others. This path-breaking book provides a comprehensive analysis of the macroeconomic effects of changes in population age structure across the globe. The result of a substantial seven-year research project involving over 50 economists and demographers from Africa, Asia, Europe, Latin America, and the United States, the book draws on a new and comprehensive conceptual framework - National Transfer Accounts - to quantify the economic lifecycle and economic flows across

generations. It presents comprehensive estimates of both public and private economic flows between generations, and emphasizes the global nature of changes in population age structure that are affecting rich and poor countries alike. This unique and informative book will prove an invaluable reference tool for a wide-ranging audience encompassing students, researchers, and academics in fields such as demography, aging, public finance, economic development, macroeconomics, gerontology, and national income accounting; for policy-makers and advisers focusing on areas of the public sector such as education, health, pensions, other social security programs, tax policy, and public debt; and for policy analysts at international agencies such as the World Bank, the IMF, and the UN.
