Psychology: Concepts and Applications Jeffrey S. Nevid 2012-01-01 PSYCHOLOGY: CONCEPTS AND APPLICATIONS, Fourth Edition, offers a concept-based approach supported by a unique pedagogical framework. Author Jeff Nevid provides a broad view of psychology that includes history, major theories, research methods, and important research findings as well as applications of contemporary research to the problems and challenges faced in everyday life. Nevid developed the effective teaching devices in this text based on a comprehensive system derived from research on learning and memory as well as his own research on textbook pedagogy. The text's successful modular format organizes each chapter into manageable

instructional units that help students focus on one topic at a time within the context of a larger chapter structure. The material also incorporates four goals that Nevid refers to as the Four E's of Effective Learning: Engaging Student Interest, Encoding Information, Elaborating Meaning, and Evaluating Progress. In the Fourth Edition, Nevid employs a new IDEA Model of Course Assessment--unique to this text--which maps specific learning goals (tied to APA goals) to measurable skills students acquire in their first exposure to psychology. Executed throughout each chapter, the model presents learning objectives that are expressed in the form of active learning verbs, and linked to measurable learning outcomes. The model is integrated with the test-item file, making it easy for instructors to select items measuring these particular outcomes. Handbook for Teaching Introductory Psychology

Michelle Rae Hebl 2001-08-01 Like its predecessors, Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of

articles from Teaching of Psychology (TOP), the official journal of the Society for the Teaching of Psychology, Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, "Issues and Approaches in Teaching Introductory Psychology," contains 52 articles on critical issues, such as: how to approach the course; understanding students' interests, perceptions, and motives; students' existing knowledge of psychology (including their misconceptions); a comparison of introductory textbooks and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and

laboratory projects, and other techniques to enhance teaching and learning in both the introductory, as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology. Attribution Friedrich Försterling 2013-11-12

Attribution concerns the scientific study of naive theories and common-sense explanations. This text provides a thorough and up-to-date introduction to the field, combining comprehensive coverage of the fundamental theoretical ideas and most significant research with an overview of more recent developments. The author begins with a broad overview of the central questions and basic assumptions of attribution research. This is followed by discussion of the ways in which causal explanations determine reactions to success or failure and how our causal explanations of other people's actions shape our behaviour toward them. The manner in which attributions may shape communication, and how people often quite indirectly communicate their beliefs about causality, is also explained. Finally, the issue of changing causal connections in training and therapy is addressed. With end of chapter summaries, further reading and exercises to illustrate key attribution phenomena, Attribution

will be essential reading for students of social psychology and associated areas such as personality, educational, organisational and clinical psychology.
