[Oxford Textbook of Global Public Health](#) Roger Detels 2017 Sixth edition of the hugely successful, internationally recognised textbook on global public health and epidemiology, with 3 volumes comprehensively covering the scope, methods, and practice of the discipline

The Oxford Handbook of Social Work in Health and Aging Daniel Kaplan 2015-10-13 This Second Edition of the Handbook addresses the evolving interdisciplinary health care context and the broader social work practice environment, as well as advances in the knowledge base which guides social work service delivery in health and aging. This includes recent enhancements in the theories of gerontology, innovations in clinical interventions, and major developments in the social policies that structure and finance health care and senior services. In addition, the policy reforms of the 2010 Patient Protection and Affordable Care Act set in motion a host of changes in the United States healthcare system with potentially profound implications for the programs and services which provide care to older adults and their families. In this volume, the most experienced and prominent gerontological health care scholars address a variety of populations that social workers serve, and the arenas in which they practice, followed by detailed recommendations of best practices for an array of physical and mental health conditions. The volume's unprecedented attention to diversity, health care trends, and implications for practice, research, policy make the publication a major event in the field of gerontological social work. This is a Must-Read for all social work social work educators, practitioners, and students interested in older adults and their families.

World Population Prospects 2019: Highlights United Nations Publications 2019-07-23 The United Nations population estimates and projections form a comprehensive set of demographic data to assess population trends at the global, regional and national levels. They are used in the calculation of many of the key development indicators commonly used by the United Nations system, including for more than one third of the indicators used to monitor progress towards the achievement of the Sustainable Development Goals. The 2019 revision of the World Population Prospects is the twenty-sixth edition of the official United Nations population estimates and projections, which have been prepared since 1951 by the Population Division of the Department of Economic and Social Affairs. The 2019 revision presents population estimates from 1950 until the present for 235 countries or areas, which have been developed through country-specific analyses of historical demographic trends. It builds on previous revisions by incorporating additional results from the 2010 and 2020 rounds of national population censuses as well as information from vital registration and recent nationally representative household sample surveys. The 2019 revision also presents population projections to the year 2100 that reflect a range of plausible outcomes at the global, regional and country levels. These Highlights summarise key population trends described by the estimates and projections presented in World Population Prospects 2019.

World Population Ageing 2017 Highlights United Nations 2019-01-31 Accurate, consistent and timely data on global trends in population age structure are critical for assessing current and future needs with respect to population ageing and for setting policy priorities to promote the well-being of the growing number and share of older persons in the population. This publication presents the highlights of the World Population Ageing 2017 report, which summarizes the trends in population ageing drawn from the latest

United Nations estimates and projections of population by age and sex, as published in World Population Prospects: The 2017 Revision. The present Highlights includes a special focus on trends in the household living arrangements of older persons - whether alone, with a spouse or with own children - reflecting newly compiled estimates from the United Nations Database on the Living Arrangements of Older Persons, 2017. [World Report on Ageing and Health](#) World Health Organization 2015-10-22 The WHO World report on ageing and health is not for the book shelf it is a living breathing testament to all older people who have fought for their voice to be heard at all levels of government across disciplines and sectors. - Mr Bjarne Hastrup President International Federation on Ageing and CEO DaneAge This report outlines a framework for action to foster Healthy Ageing built around the new concept of functional ability. This will require a transformation of health systems away from disease based curative models and towards the provision of older-person-centred and integrated care. It will require the development sometimes from nothing of comprehensive systems of long term care. It will require a coordinated response from many other sectors and multiple levels of government. And it will need to draw on better ways of measuring and monitoring the health and functioning of older populations. These actions are likely to be a sound investment in society's future. A future that gives older people the freedom to live lives that previous generations might never have imagined. The World report on ageing and health responds to these challenges by recommending equally profound changes in the way health policies for ageing populations are formulated and services are provided. As the foundation for its recommendations the report looks at what the latest evidence has to say about the ageing process noting that many common perceptions and assumptions about older people are based on outdated stereotypes. The report's recommendations are anchored in the evidence comprehensive and forward-looking yet eminently practical. Throughout examples of experiences from different countries are used to illustrate how specific problems can be addressed through innovation solutions. Topics explored range from strategies to deliver comprehensive and person-centred services to older populations to policies that enable older people to live in comfort and safety to ways to correct the problems and injustices inherent in current systems for long-term care.

[Trends and Factors in Japan's Long-Term Care Insurance System](#) Pedro Olivares-Tirado 2013-11-19 Ageing population poses a set of complex policy and dilemmas for social security systems, intensifying the concerns about rising expenditures in health care and long-term care for elderly. In this context, ageing societies has many valuable lessons to learn by studying Japan's experience dealing with its hyper-aged society and particularly from its strategies to ensure the financial sustainability of the Long-Term Care Insurance (LTCI) system. Based on an exhaustive literature review, and the results from six original researches on long-term care expenditures in Japan (LTCE) conducted during a doctoral program, the book provides a comprehensive view in analyzing trends and factors associated with increasing expenditures in the Long-Term Care Insurance system in Japan. The book address relevant topics such as; the main socio-demographic changes experienced by the Japanese society during the last three decades, predictors of the LTCE, measuring efficiency in nursing homes, the impact of the LTCI 2005-reform to contain expenditures, cost-effectiveness of the in-home and community based services and institutional LTCE in the last year of life. The book end with a discussion on futures challenges and strategies oriented to contribute with the sustainability of LTCI system in Japan.

Aging in America Robert L. Scardamalia 2014-06-17 As baby boomers reach retirement age, concerns about the financial stability of Social Security, trends in disability, health care costs, and the supply of caregivers are all at the forefront of conversation. Aging in America focuses on the economic and demographic portrait of the senior population and answers several important questions: What is the socio-economic portrait of the senior population in my community? How has this population changed over time? Where are the most diverse or most homogenous communities? What proportion of the senior population is still working? What are their incomes? Is there affordable housing in this area for seniors? How many seniors care for grandchildren? What is the incidence of disability by type? The Decennial Census and annual American Community Survey form the basis for this aging portrait. These critical data sources provide comparable and comprehensive statistics for all communities across the nation.

Crossing the Quality Chasm Institute of Medicine 2001-08-19 Second in a series of publications from the Institute of Medicine's Quality of Health Care in America project Today's health care providers have more research findings and more technology available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. Crossing the Quality Chasm makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators, purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A suggested organizing framework to better align the incentives inherent in payment and accountability with improvements in quality. Key steps to promote evidence-based practice and strengthen clinical information systems. Analyzing health care organizations as complex systems, Crossing the Quality Chasm also documents the causes of the quality gap, identifies current practices that impede quality care, and explores how systems approaches can be used to implement change.

Several tables present data according to race & Hispanic origin.

Aging in China Sheying Chen 2012-02-02 China, which is fast on its way to becoming the most powerful economic force in the world, has four unique characteristics that distinguish it from other countries in Asia: (1) The proportion of aging population is growing faster than that of Japan (the country previously recognized as having the fastest rate) and much faster than nations in western Europe. (2) An early arrival of an aging population before modernization has fully taken place, with social policy implications. It is certain that China will face a severely aged population before it has sufficient time and resources to establish an adequate social security and service system for older people. (3) There will be fluctuations in the total dependency ratio. The Chinese government estimates are that the country will reach a higher dependent burden earlier in the twenty-first century than was previously forecast. (4) The government's fertility policy (single child per family) and its implementation has a strong influence on the aging process. Fewer children are being born, but with more elderly people a conflict arises between the objectives to limit population increase and yet maintain a balanced age structure (Peng and Guo 2001). The intersection of these fourfold factors means that the increased aging population is giving rise to serious concerns among Chinese social policy makers. There is a chronic lack of good resource materials that attempt to make sense of social policy in its relationship to examining the problems and possibilities of human aging grounded in an analysis of economic of social policy in China and impact on rural and urban spaces. Such analysis of China will be covered by conceptual, theoretical, and empirical approaches. The book will also discuss

substantive topics of housing, community care, family care, pensions, and mental health. The book brings together a truly world class array of researchers to provide discussions of critical implications of aging social policy and the economic impact in China.

Aging, Economic Growth, and Old-age Security in Asia Donghyun Park 2012-01-01 Population aging is perhaps the single biggest economic and social obstacle confronting Asia's future. The region-wide demographic transition towards an older population is fundamentally reshaping the demographic landscape, and is giving rise to two key socio-economic challenges. This timely book provides an in-depth analysis of these challenges and presents concrete policy options for tackling them. First, the expert contributors argue, Asia must find ways to sustain rapid economic growth in the face of less favorable demographics, which implies slower growth of the workforce. Second, they contend, Asia must find ways to deliver affordable, adequate and sustainable old-age economic security for its growing elderly population. Underpinned by rigorous analysis, a wide range of concrete policy options for sustaining economic growth while delivering economic security for the elderly are then presented. These include Asia-wide policy options relevant to the entire region such as building up strong national pension systems, whilst other policy options are more relevant to sub-groups of countries. This stimulating and informative book will be of great interest to academics, students and researchers with an interest in Asian studies, economics generally, and more specifically, public sector economics.

Retooling for an Aging America Institute of Medicine 2008-09-27 As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use Retooling for an Aging America to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

What We Owe Each Other Minouche Shafik 2021-04-27 From one of the leading policy experts of our time, an urgent rethinking of how we can better support each other to thrive Whether we realize it or not, all of us participate in the social contract every day through mutual obligations among our family, community, place of work, and fellow citizens. Caring for others, paying taxes, and benefiting from public services define the social contract that supports and binds us together as a society. Today, however, our social contract has been broken by changing gender roles, technology, new models of work, aging, and the perils of climate change. Minouche Shafik takes us through stages of life we all experience—raising children, getting educated, falling ill, working, growing old—and shows how a reordering of our societies is possible. Drawing on evidence and examples from around the world, she shows how every country can provide citizens with the basics to have a decent life and be able to contribute to society. But we owe each other more than this. A more generous and inclusive society would also share more risks collectively and ask everyone to contribute for as long as they can so that everyone can fulfill their potential. What We Owe Each Other identifies the key elements of a better social contract that recognizes our interdependencies, supports and invests more in each other, and expects more of individuals in return. Powerful, hopeful, and thought-provoking, What We Owe Each Other provides practical solutions to current challenges and demonstrates how we can build a better society—together.

World Population Ageing, 2013 United Nations. Department of International Economic and Social Affairs. Population Division 2014-05-27 World Population Ageing 2013 provides a description of global trends in population ageing and includes a series of indicators of the ageing process by development regions, major areas, regions and countries. It considers the process of population ageing for the world as a whole, for more and less developed regions, major areas and regions as well as individual countries or

areas. Demographic profiles highlighting the relevant indicators of population ageing and covering the period 1950 to 2050 are provided for each country or area.

Aging and the Macroeconomy National Research Council 2013-01-10 The United States is in the midst of a major demographic shift. In the coming decades, people aged 65 and over will make up an increasingly large percentage of the population: The ratio of people aged 65+ to people aged 20-64 will rise by 80%. This shift is happening for two reasons: people are living longer, and many couples are choosing to have fewer children and to have those children somewhat later in life. The resulting demographic shift will present the nation with economic challenges, both to absorb the costs and to leverage the benefits of an aging population. **Aging and the Macroeconomy: Long-Term Implications of an Older Population** presents the fundamental factors driving the aging of the U.S. population, as well as its societal implications and likely long-term macroeconomic effects in a global context. The report finds that, while population aging does not pose an insurmountable challenge to the nation, it is imperative that sensible policies are implemented soon to allow companies and households to respond. It offers four practical approaches for preparing resources to support the future consumption of households and for adapting to the new economic landscape.

International Handbook of Population Aging Peter Uhlenberg 2009-04-29 The International Handbook of Population Aging examines research on a wide array of the profound implications of population aging. It demonstrates how the world is changing through population aging, and how demography is changing in response to it.

Affordable Excellence William A. Haseltine 2013 This is the story of the Singapore healthcare system: how it works, how it is financed, its history, where it is going, and what lessons it may hold for national health systems around the world. Singapore ranks sixth in the world in healthcare outcomes, yet spends proportionally less on healthcare than any other high-income country. This is the first book to set out a comprehensive system-level description of healthcare in Singapore, with a view to understanding what can be learned from its unique system design and development path. The lessons from Singapore will be of interest to those currently planning the future of healthcare in emerging economies, as well as those engaged in the urgent debates on healthcare in the wealthier countries faced with serious long-term challenges in healthcare financing. Policymakers, legislators, public health officials responsible for healthcare systems planning, finance and operations, as well as those working on healthcare issues in universities and think tanks should understand how the Singapore system works to achieve affordable excellence.

Population Health in America Robert A. Hummer 2019-07-09 In this engaging and accessibly written book, *Population Health in America* weaves demographic data with social theory and research to help students understand health patterns and trends in the U.S. population. While life expectancy was estimated to be just 37 years in the United States in 1870, today it is more than twice as long, at over 78 years. Yet today, life expectancy in the U.S. lags behind almost all other wealthy countries. Within the U.S., there are substantial social inequalities in health and mortality: women live longer but less healthier lives than men; African Americans and Native Americans live far shorter lives than Asian Americans and White Americans; and socioeconomic inequalities in health have been widening over the past 20 years. What accounts for these population health patterns and trends? Inviting students to delve into population health trends and disparities, demographers Robert Hummer and Erin Hamilton provide an easily understandable historical and contemporary portrait of U.S. population health. Perfect for courses such as population health, medical or health sociology, social epidemiology, health disparities, demography, and others, as well as for academic researchers and lay persons interested in better understanding the overall health of the country, *Population Health in America* also challenges students, academics, and the public to understand current health policy priorities and to ask whether considerably different directions are needed.

Future Directions for the Demography of Aging National Academies of Sciences, Engineering, and Medicine 2018-07-21 Almost 25 years have passed since the *Demography of Aging* (1994) was published by the National Research Council. *Future Directions for the Demography of Aging* is, in many ways, the successor to that original volume. The Division of Behavioral and Social Research at the National Institute on Aging (NIA) asked the National Academies of Sciences, Engineering, and Medicine to produce an

authoritative guide to new directions in demography of aging. The papers published in this report were originally presented and discussed at a public workshop held in Washington, D.C., August 17-18, 2017. The workshop discussion made evident that major new advances had been made in the last two decades, but also that new trends and research directions have emerged that call for innovative conceptual, design, and measurement approaches. The report reviews these recent trends and also discusses future directions for research on a range of topics that are central to current research in the demography of aging. Looking back over the past two decades of demography of aging research shows remarkable advances in our understanding of the health and well-being of the older population. Equally exciting is that this report sets the stage for the next two decades of innovative research—a period of rapid growth in the older American population.

Aging in Asia National Research Council 2012-07-31 The population of Asia is growing both larger and older. Demographically the most important continent on the world, Asia's population, currently estimated to be 4.2 billion, is expected to increase to about 5.9 billion by 2050. Rapid declines in fertility, together with rising life expectancy, are altering the age structure of the population so that in 2050, for the first time in history, there will be roughly as many people in Asia over the age of 65 as under the age of 15. It is against this backdrop that the Division of Behavioral and Social Research at the U.S. National Institute on Aging (NIA) asked the National Research Council (NRC), through the Committee on Population, to undertake a project on advancing behavioral and social research on aging in Asia. *Aging in Asia: Findings from New and Emerging Data Initiatives* is a peer-reviewed collection of papers from China, India, Indonesia, Japan, and Thailand that were presented at two conferences organized in conjunction with the Chinese Academy of Sciences, Indian National Science Academy, Indonesian Academy of Sciences, and Science Council of Japan; the first conference was hosted by the Chinese Academy of Social Sciences in Beijing, and the second conference was hosted by the Indian National Science Academy in New Delhi. The papers in the volume highlight the contributions from new and emerging data initiatives in the region and cover subject areas such as economic growth, labor markets, and consumption; family roles and responsibilities; and labor markets and consumption.

Demography of Aging National Research Council 1994-02-01 As the United States and the rest of the world face the unprecedented challenge of aging populations, this volume draws together for the first time state-of-the-art work from the emerging field of the demography of aging. The nine chapters, written by experts from a variety of disciplines, highlight data sources and research approaches, results, and proposed strategies on a topic with major policy implications for labor forces, economic well-being, health care, and the need for social and family supports.

The Future of the Public's Health in the 21st Century Institute of Medicine 2003-02-01 The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. *The Future of the Public's Health in the 21st Century* reaffirms the vision of *Healthy People 2010*, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.

Aging and Work in the 21st Century Kenneth S. Shultz 2007 The aging of baby boomers, along with the predicted decrease of the available labor pool, will place increased scrutiny and emphasis on issues relating to an aging workforce. Furthermore, future economic downturns will place strong pressure on older workers to remain in the workforce, and on retirees to seek employment again. *Aging and Work in the 21st Century* reviews, summarizes, and integrates existing literature from various disciplines with regard to

aging and work. Chapter authors, all leading experts within their respective areas, provide recommendations for future research, practice, and/or public policy. This definitive source comprehensively reviews: trends and implications regarding the demography, income, and diversity of the aging workforce; the issue of age bias in the workplace; job performance, work-related attitudes, training and development, and career issues of older workers; and topics of age and occupational health, technology, work and family issues, and retirement. The intended audience is advanced undergraduate and graduate students, as well as researchers in the disciplines of industrial and organizational psychology; developmental psychology; gerontology; sociology; economics; and social work. Older worker advocate organizations, like AARP, will also take interest in this edited book.

Development in an Ageing World United Nations. Department of Economic and Social Affairs 2007 Greater longevity is an indicator of human progress in general. Increased life expectancy and lower fertility rates are changing the population structure worldwide in a major way: the proportion of older persons is rapidly increasing, a process known as population ageing. The process is inevitable and is already advanced in developed countries and progressing quite rapidly in developing ones. The 2007 Survey analyses the implications of population ageing for social and economic development around the world, while recognising that it offers both challenges and opportunities. Among the most pressing issues is that arising from the prospect of a smaller labour force having to support an increasingly larger older population. Paralleling increased longevity are the changes in intergenerational relationships that may affect the provision of care and income security for older persons, particularly in developing countries where family transfers play a major role. At the same time, it is also necessary for societies to fully recognise and better harness the productive and social contributions that older persons can make but are in many instances prevented from making. The Survey argues that the challenges are not insurmountable, but that societies everywhere need to put in place the policies required to confront those challenges effectively and to ensure an adequate standard of living for each of their members, while respecting and promoting the contribution and participation of all.

The Longevity Economy Joseph F. Coughlin 2017 Oldness: a social construct at odds with reality that constrains how we live after middle age and stifles business thinking on how to best serve a group of consumers, workers, and innovators that is growing larger and wealthier with every passing day. Over the past two decades, Joseph F. Coughlin has been busting myths about aging with groundbreaking multidisciplinary research into what older people actually want-not what conventional wisdom suggests they need. In *The Longevity Economy*, Coughlin provides the framing and insight business leaders need to serve the growing older market: a vast, diverse group of consumers representing every possible level of health and wealth, worth about \$8 trillion in the United States alone and climbing. Coughlin provides deep insight into a population that consistently defies expectations: people who, through their continued personal and professional ambition, desire for experience, and quest for self-actualization, are building a striking, unheralded vision of longer life that very few in business fully understand. His focus on women-they outnumber men, control household spending and finances, and are leading the charge toward tomorrow's creative new narrative of later life-is especially illuminating. Coughlin pinpoints the gap between myth and reality and then shows businesses how to bridge it. As the demographics of global aging transform and accelerate, it is now critical to build a new understanding of the shifting physiological, cognitive, social, family, and psychological realities of the longevity economy.

The Economics of Aging David A. Wise 2009-05-15 *The Economics of Aging* presents results from an ongoing National Bureau of Economic Research project. Contributors consider the housing mobility and living arrangements of the elderly, their labor force participation and retirement, the economics of their health care, and their financial status. The goal of the research is to further our understanding both of the factors that determine the well-being of the elderly and of the consequences that follow from an increasingly older population with longer individual life spans. Each paper is accompanied by critical commentary.

World Population Ageing 2019 Highlights United Nations 2019-12-18 Drawing on the 2019 revision of World Population Prospects, the World Population Ageing 2019 (Highlights) document global and regional trends in population ageing, including consideration of the implications of these trends for the

implementation of the 2030 Agenda. The report also presents various concepts and indicators related to population ageing and discusses related fiscal and economic implications.

The Upside of Aging Paul Irving 2014-04-21 *The Upside of Aging: How Long Life Is Changing the World of Health, Work, Innovation, Policy and Purpose* explores a titanic shift that will alter every aspect of human existence, from the jobs we hold to the products we buy to the medical care we receive - an aging revolution underway across America and the world. Moving beyond the stereotypes of dependency and decline that have defined older age, *The Upside of Aging* reveals the vast opportunity and potential of this aging phenomenon, despite significant policy and societal challenges that must be addressed. The book's chapter authors, all prominent thought-leaders, point to a reinvention and reimagination of our older years that have critical implications for people of all ages. With a positive call to action, the book illuminates the upside for health and wellness, work and volunteerism, economic growth, innovation and education. The authors, like the baby boom generation itself, posit new ways of thinking about aging, as longevity and declining birthrates put the world on track for a mature population of unprecedented size and significance. Among topics they examine are: The emotional intelligence and qualities of the aging brain that science is uncovering, "senior moments" notwithstanding. The new worlds of genomics, medicine and technology that are revolutionizing health care and wellness. The aging population's massive impact on global markets, with enormous profit potential from an explosion in products and services geared toward mature consumers. New education paradigms to meet the needs and aspirations of older people, and to capitalize on their talents. The benefits that aging workers and entrepreneurs bring to companies, and the crucial role of older people in philanthropy and society. Tools and policies to facilitate financial security for longer and more purposeful lives. Infrastructure and housing changes to create livable cities for all ages, enabling "aging in place" and continuing civic contribution from millions of older adults. The opportunities and potential for intergenerational engagement and collaboration. *The Upside of Aging* defines a future that differs profoundly from the retirement dreams of our parents and grandparents, one that holds promise and power and bears the stamp of a generation that has changed every stage of life through which it has moved.

Health, United States, 2016, with Chartbook on Long-Term Trends in Health National Center for Health Statistics 2017-08-16 This annual overview report of national trends in health statistics contains a Chartbook that assesses the nation's health by presenting trends and current information on selected measures of morbidity, mortality, health care utilization and access, health risk factors, prevention, health insurance, and personal health-care expenditures. Chapters devoted to population characteristics, prevention, health risk factors, health care resources, personal health care expenditures, health insurance, and trend tables may provide the health/medical statistician, data analyst, biostatistician with additional information to complete experimental studies or provide necessary research for pharmaceutical companies to gain data for modeling and sampling. Undergraduate students engaged in applied mathematics or statistical compilations to graduate students completing biostatistics degree programs to include statistical inference principles, probability, sampling methods and data analysis as well as specialized medical statistics courses relating to epidemiology and other health topics may be interested in this volume. Ageing in East Asia Tsung-hsi Fu 2009-02-13 Ageing populations present considerable challenges to welfare states internationally, and East Asia is no exception. Demographics show that countries in East Asia either have the highest proportion of older people, or the speed at which their population is ageing is faster than anywhere else in the world. This book explores the causes and trends of population ageing in eight countries, and discusses the challenges and impacts of population ageing on public policies. East Asian countries have developed new policies to meet older people's needs - across health, social care, income maintenance, employment and housing. Ageing in East Asia provides the first comprehensive introduction to ageing policies in East Asian countries. The book: explores causes and trends of population ageing discusses the challenges and impacts of population ageing on public policies examines the important strategic and theoretical policy contexts of ageing policies in East Asian countries covers eight East Asian countries in dedicated chapters: examining Japan, China, South Korea, Taiwan, Hong Kong, Singapore, Malaysia and Thailand. This volume brings East Asian countries clearly into focus, and illuminates the state of welfare development internationally. It provides an important resource for lecturers, students, researchers and policy makers with interest in East Asia, older people and welfare policy.

Preparing for an Aging World National Research Council 2001-07-26 Aging is a process that encompasses virtually all aspects of life. Because the speed of population aging is accelerating, and because the data needed to study the aging process are complex and expensive to obtain, it is imperative that countries coordinate their research efforts to reap the most benefits from this important information. *Preparing for an Aging World* looks at the behavioral and socioeconomic aspects of aging, and focuses on work, retirement, and pensions; wealth and savings behavior; health and disability; intergenerational transfers; and concepts of well-being. It makes recommendations for a collection of new, cross-national data on aging populations that will allow nations to develop policies and programs for addressing the major shifts in population age structure now occurring. These efforts, if made internationally, would advance our

understanding of the aging process around the world.

Measuring and Accounting for Innovation in the Twenty-First Century Carol Corrado 2021-05-12 "Measuring innovation is a challenging task, both for researchers and for national statisticians. This task is timely and valuable given that policy and public interest in innovation has become increasingly intense in this era of digital revolution, yet National GDP Accounts and other economic statistics do not fully account for the wide range of innovative activity that is plainly evident in everyday experience. Indeed, innovation has in many ways changed the structure of an increasingly digitized marketplace, from cloud computing to the gig economy. The papers collected in this volume, *Measuring and Accounting for Innovation in the Twenty-First Century*, address many different dimensions of this challenge, ranging from how to best to define GDP to the fundamental question of what is an innovation and how to collect data at the level of an individual innovation. Taken together, the volume provides a comprehensive overview of the cutting-edge of this widely varied but thematically-connected research that draws on multiple methodologies and data. The editors and authors consider how measurement frameworks could be expanded to enhance our understanding of innovative activity; new approaches and evidence that could account for innovation's economic impact; innovation's effect across the economy, from production processes to labor markets and financial activities; and what practical adjustments could be made to current measurements that would better capture innovation. The distinctive stance of this volume makes clear that the challenge of measuring innovation and understanding its implications has become increasingly complex as the economy has evolved. The editors and authors show that the limitations of our existing measurement system significantly hinder researchers, analysts, and policymakers. Better measures of innovative activity are necessary to interpret the consequences of innovation in daily life and to inform policies that best promote the attendant benefits, including distribution of income, trademark protections, and more. Now, in an era of fake news and alternative facts, it is more important than ever to push for accuracy in basic economic facts"--

The Aging Population in the Twenty-First Century National Research Council 1988-02-01 It is not news that each of us grows old. What is relatively new, however, is that the average age of the American population is increasing. More and better information is required to assess, plan for, and meet the needs of a graying population. *The Aging Population in the Twenty-First Century* examines social, economic, and demographic changes among the aged, as well as many health-related topics: health promotion and disease prevention; quality of life; health care system financing and use; and the quality of care especially long-term care. Recommendations for increasing and improving the data available as well as for ensuring timely access to them are also included.

Public Health and Aging Tom Hickey 1997-05-02 The role of public health in the planning, coordination, and delivery of health promotion and disease prevention services to older people living outside of institutional settings. Selected by *Choice Magazine* as an Outstanding Academic Title Current issues in the public health arena have challenged the system to broaden its traditional focus on infectious disease to include chronic disease as well. As this change in emphasis takes place, professionals must be prepared to address the special chronic health concerns of older people living in the community. This textbook meets the training needs of those professionals. *Public Health and Aging* examines the role of public health in the planning, coordination, and delivery of health promotion and disease prevention services to older people living outside of institutional settings. Here, experts in the areas of health care policy and care of aged persons analyze the scientific basis for the practice of public health in an increasingly aging society. Reviewing a wide range of the social, cultural, financial, and environmental factors that influence the health experiences of older population groups, the authors delve into the epidemiology of age-related chronic illnesses, program development, methodological issues, data collection and analysis, strategies for intervention, and ethics. From outlines for community-based program planning and development to discussions about the future challenges for health care systems and services, this book is an ideal reference for gerontology, public policy, and public health professionals and professionals in training.
